

Subject card

Subject name and code	District heating installations, PG_00055940						
Field of study	Power Engineering						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Division of Thermal Power Systems -> Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology -> Faculties of Gdańsk University of Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jacek Barański				
	Teachers		dr hab. inż. Jacek Barański				
Lesson types	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	Present of knowledge and skills in the field of operation of municipal heat supply systems, including: medium-power heat source, heating network and heating substations.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U08] can design the basic parameters of the selected technology related to energy conversion and select auxiliary devices and evaluate the project in terms of technical and economic		The student is able to design the basic parameters of the selected technology related to energy conversion and select auxiliary devices and assess the project in technical terms.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_U06] is able to use the basic knowledge on the operation of energy equipment in the field of thermal power plants, thermal and energy and heating systems, combustion engines, compressors and rotating machines to assess the technical condition of the system		The student is able to use the basic knowledge of the operation of power equipment in the field of thermal-energy and heating systems.		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_W10] knows the basic installations in the field of renewable energy sources and their impact on the environment		The student knows the basic installations in the field of renewable energy sources and their impact on the environment.		[SW1] Assessment of factual knowledge		

Subject contents	Course content – lecture Lecture: Overview of basic issues in the field of heating. Heat balance of the heating system. Heating plants. Heat systems. Thermal substations. Project: Heat losses in district heating installation. Calculation and heating node's elements selection.		
Prerequisites and co-requisites	Mathematics Physics Thermodynamics Fluid mechanics Heat transfer		
Assessment methods and criteria		Subject passing criteria	Passing threshold
	written test	56.0%	80.0%
	project	56.0%	20.0%
