

Subject card

Subject name and code	Construction Materials, PG_00055369							
Field of study	Mechanical Engineering							
Date of commencement of studies	October 2024	Academic year of realisation of subject		2024/2025				
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1	Language of instruction		Polish				
Semester of study	1	ECTS credits		6.0				
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Krzysztofowicz					
	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar		
	Number of study hours	45.0	0.0	30.0	0.0	0.0		
E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		SUM		
	Number of study hours	75		6.0		69.0		
Subject objectives		Acquainting with the basic concepts of materials science as well as the construction and application of construction materials						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	<p>[K6_W03] possesses and is able to practically apply the knowledge on the construction, properties and testing methods of construction materials</p>	<p>Student defines types of materials, crystal systems, phase equilibrium systems. The student distinguishes between individual materials within a given group, heat treatment and plastic treatment. The student knows the basic sources of obtaining information about materials.</p> <p>Community Verified icon  <a href="#">Open in Google Translate</a>  •  Feedback</p> <p>Tłumacz Google  <a href="https://translate.google.com">https://translate.google.com</a> &gt; ... 	[K6_U10] is able to formulate the principles of selecting a material for a construction, ensuring the correct operation of a device	The student analyzes the relationships between the structure of the material and its properties. The student explains the concepts of imperfections of the crystal structure, crystallization, heat and plastic treatment. The student analyzes the changes in the structure of the material under the influence of heat and plastic treatment. The student defines the concepts of steels and non-ferrous alloys, ceramics and polymers, and the most important alloys in this area, along with their properties and application.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K6_W08] possesses knowledge including the methodology of designing machine parts, mechanical devices, selection of construction materials, manufacturing and operation, with the lifetime cycle	The student is able to indicate the type and method of machining the material of the part. The student analyzes the types of degradation and their relationship with the properties of the material.	[SW1] Assessment of factual knowledge
Subject contents	<p>ecture Materials and their importance in technology. The structure of matter. Characteristics of the main groups of materials. General rules for the selection of engineering materials in machine building. Crystalline structure of materials. Crystal structure defects. The influence of structure defects on the mechanical properties of materials. Polymorphism. Crystallization of metals and alloys. Mechanical properties of materials. Materials testing methods. Properties anisotropy. Material degradation. Brittle cracking. Fatigue of materials. High temperature degradation. Chemical, electrochemical and biological corrosion. Forms of corrosion: general, local, galvanic, selective, intercrystalline, gas, stress, fatigue, hydrogen, shock attack, cavitation erosion. Metal alloys. Mechanisms of strengthening metals and alloys, phase transitions. Phase equilibrium systems. Classification of phase transformations. Solid state transformations. Iron-carbon phase equilibrium system. Phase and structural components of the system. Manufacture of iron and its alloys. Pig iron metallurgy. Steel metallurgy. Steelmaking processes. Cast iron metallurgy. Methods of producing semi-finished products and products. Division and classification of steel. Alloy and unalloyed steels. Structural steels. Tool steels. Steels with special properties - corrosion-resistant steels, heat-resistant and heat-resistant steels. Foundry iron alloys. Cast steel and cast iron. Standardization and classification as well as steel and cast iron marking systems. Shaping the structure and properties of engineering materials by technological methods. Crush and recrystallization. Heat and thermo-chemical treatment. Transformations during heating and cooling of iron alloys. CTP charts. Hardenability of steel. Annealing of steel, volume and surface hardening, carburizing, nitriding. Technical non-ferrous metal alloys. Copper and its alloys. Light metals and their alloys. Zinc and its alloys. Bearing alloys. Nickel, titanium and cobalt alloys. Low-melting alloys. Ceramic materials - classification, properties, production. Polymer materials - division, properties, production. Composite construction materials - division, properties, production. Biomimetics. Trends in material development.</p> <p>Laboratory</p> <p>Metallography. Fe-Fe3C phase equilibrium system. Unalloyed steels in the annealed condition. Foundry iron alloys. Hardening and tempering. Corrosion-resistant steels. Tool steels. Non-ferrous alloys.</p>		
Prerequisites and co-requisites			

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	Colloquium	50.0%	50.0%		
	Passing laboratory	50.0%	50.0%
