

Subject card

Subject name and code	Vehicle Dynamics Theory, PG_00055496						
Field of study	Mechanical Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Machine Design and Vehicles -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Ryszard Woźniak				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		27.0	75
Subject objectives	Issues presentation related to the kinematics and dynamics of car movement with particular emphasis of the drag movement, and overcoming them by the drive system equipped with an internal combustion engine.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U03] is able to identify, formulate and develop the documentation of a simple design or technological task, including the description of the results of this task in Polish or in a foreign language and to present the results using computer software or other aiding tools	The student describes the characteristics engines. Discusses team performance car propulsion system. Describes tire grip. He chooses the engine for the car. Calculates the value of gears in car propulsion system on the lowest gears. Calculates the value of gear ratios in car propulsion system.	[SU1] Assessment of task fulfilment
	[K6_U06] is able to use mathematical and physical models for analysing the processes and phenomena occurring in mechanical devices within the range of material strength, thermodynamics and fluid mechanics	The student describes the characteristics engines. Discusses team performance car propulsion system. Describes tire grip. He chooses the engine for the car. Calculates the value of gears in car propulsion system on the lowest gears. Calculates the value of gear ratios in car propulsion system.	[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
	[K6_W08] possesses knowledge including the methodology of designing machine parts, mechanical devices, selection of construction materials, manufacturing and operation, with the lifetime cycle	The student describes the characteristics engines. Discusses team performance car propulsion system. Describes tire grip. He chooses the engine for the car. Calculates the value of gears in car propulsion system on the lowest gears. Calculates the value of gear ratios in car propulsion system.	[SW1] Assessment of factual knowledge
Subject contents	<p>LECTURE Throttle by tyre wheel: slip rolling, rolling with tyre strain, vertical and lateral surface reactions, traction, energetic losses, forces in contact path. Drags of movement: air, gradient, inertia and towing. Forces and torques acting to vehicle in straight movement. Limiting values of reaction forces. Different power trains - comparison of possibilities. Engine cooperation with power train of traction vehicle. Efficiency of power train. Vehicle traction possibilities: power balance, force balance, dynamic ratio and dynamic figures, distance and time of acceleration. Selection of transmission ratios. Influence of hydrokinetic power train on vehicle traction possibilities. Vehicle braking. EXERCISES Drags of movement: calculations of: air drag, gradient drag, inertia drag, cornering drag, towing drag, forces and torques acting to the vehicle going straight or turning. Calculations of limiting values of reaction forces. Calculations of efficiency of power train. Calculations of: power balance, force balance, dynamic ratios, distance and time of acceleration. Calculations of transmission ratios in power train. Calculations of braking force balance on each vehicle wheel during braking.</p> <p>LABORATORY Determination of rolling tyre radius. Determination of rolling resistance coefficient of the car. Determination of drag coefficient of the car.</p>		
Prerequisites and co-requisites	Knowledge from subjects: mathematics I i II i III (07000W0 i 07000C0) and physics I i II (07001W0 i 07001C0).		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	50.0%	100.0%
