

Subject card

Subject name and code	Kinematics and dynamics of machines, PG_00055405						
Field of study	Mechatronics						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2025/2026	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	3	ECTS credits				6.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Krzysztof Lipiński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	15.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		6.0		69.0	150
Subject objectives	Acquainting with definitions of the most fundamental terms: machine/mechanism; link; pair and kinematic chain. Overview of the commonly used mechanisms. Acquainting with the most important terms of structural analysis: classification of links and pairs; mobility, single-degree chains; functional and structural classification. Presentation of the most important methods of positions, velocities and accelerations problems. Presentation of methods of dynamics of mechanisms. Introduction to problems of free and forced vibrations of systems of one degree and of many degrees of freedom.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U03] has self-learning skills		has the ability to self-study and to independently solve problems formulated in mechanics; theory of mechanisms and dynamics of machines; as well as in vibrations in mechanical systems			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment	
	[K6_U01] is able to acquire information from literature, databases and other, properly chosen sources, integrate these information, interpret them, draw conclusions and formulate opinions		is able to obtain information in the field of general mechanics, theory of mechanisms and dynamics of machines and vibrations, using the literature, databases and other sources, is able to integrate the obtained information, interpret it, as well as draw conclusions and formulate and justify opinions			[SU1] Assessment of task fulfilment	
	[K6_W04] has organized and theoretically supported, advanced knowledge in the field of general mechanics, strength of materials, theory of mechanisms and machine dynamics, fluid dynamics, hydraulics and pneumatics, machine construction and engineering graphics		has an ordered and theoretically founded knowledge about mechanics; theory of mechanisms; dynamics of machines; as well as knowledge about vibrations in mechanical systems			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge	

Subject contents	<p>Machine and mechanism; the need of a simultaneous transfer of movement and force; The most important structural elements of machines and mechanisms; open and closed kinematic chains; classification of kinematic pairs; classification of kinematic links. Tasks of analysis and synthesis. Planning the trajectory. Direct and invert tasks. Overview of the most popular types of mechanisms. Functional classification; Structural analysis, mobility of mechanisms; structural equation of mobility of mechanisms; single-degree mobility of the kinematic chains; apparent constraints; local mobility; partial and complete mobility. Structural classification; family; structural group; class, order, and form of a structural group. Method of solving the task of studying positions, velocities and accelerations of elements of mechanisms. Diagrammatic, analytical and numerical methods. Methods of marked trajectory. Differentiation of constraint equations; kinematics of relative motion; plans of velocities and of accelerations; instantaneous centres of speed and acceleration. Dynamics of mechanisms: types of forces; methods used to mark the reaction forces; kinetostatics equations; resolving of forces in kinematic pairs; three-mass analogy; differential equations of motion of mechanisms; parameters reduced on the shaft. Balancing of planar mechanisms. Free vibrations of systems with one degree of freedom for systems with and without damping. Logarithmic decrement of damping. Correlation between the damping on the frequency of vibrations. Forced vibrations of systems with one degree of freedom for systems with and without damping. Homogeneous and heterogeneous solution. Frequency of forced vibrations. Resonance (amplitude) and phase characteristics. Correlations between damping on the amplitude and phase characteristics. Initial conditions in case of forced vibrations. Free and forced vibrations of systems with many degrees of freedom. Matrix of masses and stiffness. The shape and frequency of free vibration. Conditions for the existence of a non-trivial solution. Eigenvalues and eigenvectors of matrices.</p>														
Prerequisites and co-requisites	<p>Mechanics including statics, kinematics, dynamics of mechanical systems. Mathematics including algebra, matrix calculus, differential and integral calculus, linear differential equations.</p>														
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="453 642 794 678">Subject passing criteria</th> <th data-bbox="794 642 1145 678">Passing threshold</th> <th data-bbox="1145 642 1493 678">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 678 794 736">colloquia with solving practical problems</td> <td data-bbox="794 678 1145 736">56.0%</td> <td data-bbox="1145 678 1493 736">25.0%</td> </tr> <tr> <td data-bbox="453 736 794 795">note of final evaluation of the project</td> <td data-bbox="794 736 1145 795">56.0%</td> <td data-bbox="1145 736 1493 795">50.0%</td> </tr> <tr> <td data-bbox="453 795 794 831">final test of the theory</td> <td data-bbox="794 795 1145 831">56.0%</td> <td data-bbox="1145 795 1493 831">25.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	colloquia with solving practical problems	56.0%	25.0%	note of final evaluation of the project	56.0%	50.0%	final test of the theory	56.0%	25.0%
