

Subject card

Subject name and code	Computer-Aided Designing of electrical circuits and systems, PG_00055452						
Field of study	Mechatronics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Controlled Electric Drives -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Krzysztof Blecharz					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	The aim of the course is to provide students with knowledge in the field of designing electrical and electronic systems and circuits with the use of modern computer engineering tools.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U06] is able to identify and formulate specification of simple, practical engineering tasks, distinctive for mechatronics	The student is able to define a technical problem on the basis of a set of principles and rules describing the operation of a specific mechatronic device.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_U07] is able to design elements of mechatronic systems taking into consideration given application and economic criteria, using appropriate methods, techniques and tools	The student is able to choose and use appropriate to the undertaken problem engineering software.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K6_W08] knows and understands design and production processes of elements and simple mechatronic devices	The student is able to use technical documentation provided by manufacturers of electrical and electronic components for design purposes.			[SW3] Assessment of knowledge contained in written work and projects		
	[K6_W05] has knowledge in the field of electrical engineering, electronics and construction materials applied in mechatronics	The student characterizes what technical solution should be applied to a specific group of technical problems in the field of mechatronics.			[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	As part of the course, students carry out projects covering the electrical and electronic parts of simple mechatronic systems. Students will learn about the stages of creating a printed circuit board design and designing power supply paths for electrical systems. In the design process, they are obliged to use dedicated modern computer programs such as CAD and CAM. For the students will be discussed the rules of creating professional technical and executive documentation.						
Prerequisites and co-requisites	Basic knowledge of electronics, power electronics and electromechanics is required.						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Lecture	50.0%			20.0%		
	Design exercises	50.0%			80.0%
