

Subject card

Subject name and code	Numerical methods, PG_00060541						
Field of study	Design and Construction of Yachts, Naval Architecture and Offshore Structures						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Aleksander Kniat				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The subject is intended to familiarize students with numerical methods for solving basic problems in the field of mathematical analysis. For this purpose, examples will be presented, and then students will solve the excercises themselves. Completing the excercises will require basic programming skills in Python or C# language.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W04] has knowledge in the field of computer science, electronics, electrical engineering, automation and control, information technology, computer graphics, useful for understanding the possibilities of their use in ocean engineering		Student is able to choose the right method to solve a problem and can present the results.		[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		
	[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task		Student can write a simple program, that performs numerical calculations and displays results.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
Subject contents	searching for zeros of functions bisection method Newton's method numerical integration square/trapezium method Simpson's method solving differential equations Euler's method interpolation polynomial (Lagrange's polynomial) splines						

Prerequisites and co-requisites	1. basic knowlegde in the field of mathematical analysis		
	2. basic understandin how to write a program in Python or C# language		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	completed excercises	50.0%	100.0%
