

Subject card

Subject name and code	Strength of Materials, PG_00060586						
Field of study	Design and Construction of Yachts						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			8.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Zakład Mechaniki Konstrukcji Oceanotechnicznych -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Tomasz Mikulski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	30.0	15.0	0.0	0.0	90
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		9.0		101.0	200
Subject objectives	<p>The aim of the course is to provide theoretical foundations of mechanics and strength regimes of one-dimensional structures (rods, beams). Student after the course should be able to:</p> <ul style="list-style-type: none"> - determine the distributions of internal forces and moments - determine the stress distribution, - calculate the displacements of one-dimensional structures, - indicate the place of the greatest material effort at typical structure loads, - calculate the effort of material using a variety of strength material hypothesis. 						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W02] has knowledge in the field of technical mechanics, fluid mechanics, strength of materials, necessary to understand the basic physical phenomena occurring in ocean engineering		The student has acquired skills troubleshooting law-based technology mechanics and basic analysis strength of materials.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_W03] has knowledge of hydromechanics, thermodynamics, machine design, ecology, materials science necessary to understand the principles of construction and operation of ocean engineering facilities and equipment		The student can recognize the problem of mechanics technical evaluation behavior of systems construction and yacht equipment.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U05] able to formulate a simple engineering task and its specification in the field of yacht design, construction, and operation		The student can recognize the problem of mechanics technical evaluation behavior of systems construction and yacht equipment.		[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		

Subject contents	<ol style="list-style-type: none"> 1. Basics assumptions and description of the Strength of Materials problems. 2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law. 3. Axial tension and compression of the rod. 4. The internal forces. Statically determinate structures: beams, trusses and frames. Cross-sectional axial forces, shear forces, bending moments, torsional moments. 5. Moments of inertia of plane figures. 6. Bending of beams. 7. Torsion of monolithic and thin-walled bars. 8. Eccentric tension (compression) of the bar. 9. Shear stresses in bending problems. 10. Bending line of beam. Euler's equation. 11. Buckling of axially compressed rods. 12. Strength hypotheses. Complex stress problems. 		
Prerequisites and co-requisites	The student has passed the following subjects: - General Mechanics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	50.0%	30.0%
	laboratory	50.0%	20.0%
	exercise	50.0%	50.0%

	Supplementary literature	no data available	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	What differs plane state of stresses of the plane state of strains? What determines elongation of the axially tensioned rod? In which case there is a beam skew bending problem? Describe and review strength hypotheses. What determines the critical force of the compressed rod?		
Work placement	Not applicable
