

Subject card

Subject name and code	Physics, PG_00055063						
Field of study	Management and Production Engineering						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Małgorzata Śmiatek-Telega					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		4.0		61.0	125
Subject objectives	Acquiring knowledge that is the subject of modern physics						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_K03] is aware of the social role of a graduate of a technical university, understands the importance of non-technical aspects and effects of engineering activities including their impact on the environment and responsibility for decisions, sees the need to formulate and provide the public with information and opinions on the achievements of technology, correctly identifies and resolves dilemmas associated with the job of an engineer	student understands the importance of non-technical aspects and effects of engineering activities, including its impact on the environment			[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W01] has knowledge of linear algebra, differential equations, analysis and mathematical statistics useful for modelling and interpreting mechanical systems, manufacturing processes and operating properties of devices, has structured knowledge of physics including classical mechanics, optics, electricity and magnetism, demonstrates knowledge of elements of quantum physics	The student has ordered knowledge of modern physics, optics, electricity and magnetism, demonstrates the knowledge of the elements of quantum physics			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U02] has the ability of self-learning and expanding knowledge in a specialized field of engineering production	The student has the ability to analyze information and use methods to expand specialist knowledge in the field of production engineering.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
Subject contents	1. Mathematical introduction. 2. Electromagnetic waves 3. Wave optics 4. Lasers 5. Lidars 6. Schrödinger equation; examples of solutions to the Schrödinger equation: 7. Models of the atom 8. Stern-Gerlach experiment and electron spin. 9. Multi-electron atoms; Zeeman effect and spin-orbit coupling; 10. Physics of the atomic nucleus 11. Radioactivity 12. Electric conductivity 13. Quantum computers						

Prerequisites and co-requisites	Knowledge of classical physics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	50.0%	35.0%
	Lecture	50.0%	30.0%
	Exercises	50.0%	35.0%
Recommended reading	Basic literature	Fizyka dla Szkół Wyższych Tom 3 https://openstax.org/details/books/fizyka-dla-szk%C3%B3%C5%82-wy%C5%BCszych-tom-3	
	Supplementary literature	D. Halliday, R. Resnick, J. Walker, Podstawy fizyki, t5, PWN	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Particle-wave nature of light and matter. 2. Heisenberg uncertainty principles. Schrödinger equation and examples of its solutions. 3. Schrödinger equation of hydrogen atom, quantum numbers. 4. Stern-Gerlach experiment, spin of electron. 5. Spin-orbit coupling, total momentum of electron in atom. 6. Zeeman phenomena, Models of nucleus: liquid drop model, Fermi gas model, shell model. 7. Quantum statistics. 		
Work placement	Not applicable
