

## Subject card

Subject name and code	Digital Technology - laboratory, PG_00047557						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Automatic Control -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Pazio				
	Teachers		dr inż. Kamil Stawiarski  dr inż. Marcin Pazio				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		66.0	100
Subject objectives	<p>The class of logic students acquire knowledge of:</p>  <p>- The mathematical systems used to describe iterative combination and sequence combination</p>  <p>- Introduction to binary, binary, Boolean algebra arytmetyka's logical functions</p>  <p>- Basic concepts, systems, systems iterative</p>  <p>- Synthesis of sequential iterative and sequence</p>  <p>- Synthesis of synchronous and asynchronous sequential Circuits</p>  <p>- memory</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications	Student after lab classes. The TC can design, according to the specified specification, and perform typical digital systems a simple device, object, system or process, using appropriately selected methods, techniques, tools and materials, using standards and Engineering standards, using technology-specific technologies and using the experience gained in an environment of professional engineering activities	[SU1] Assessment of task fulfilment
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student after lab classes. The TC can design, according to the specified specification, and perform typical digital systems a simple device, object, system or process, using appropriately selected methods, techniques, tools and materials, using standards and Engineering standards, using technology-specific technologies and using the experience gained in an environment of professional engineering activities	[SU4] Assessment of ability to use methods and tools
Subject contents	. TTL and CMOS gates testing 2. Designing, assembling and testing iterative circuits 3. Designing and assembling digital timing circuits 4. Designing synchronous sequential circuits 5. Assembling and testing synchronous sequential circuits 6. Designing counter modules 7. Assembling and testing counter modules 8. Designing, assembling and testing register modules 9. Designing asynchronous sequential circuits 10. Assembling and testing asynchronous sequential circuits 11. Microprogramming: coding data interchange between digital modules 12. Microprogramming: implementing the code from ex.11 13. Prototyping digital circuits: designing various projects 14. Assembling projects from ex.13 15. Prototyping: testing projects from ex.14		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Realization of task	50.0%	50.0%
	activity / presence	50.0%	50.0%
Recommended reading	Basic literature	R. F. Tinder, Engineering Digital Design J. D. Daniels, Digital Design from Zero to One Texas Instruments, Digital Design Seminar M. Barski, W. Jędruch, Digital Circuits W. Majewski, Logical Circuits Zieliński C.: Fundamentals of Digital Circuit Design, Wydawnictwo Naukowe PWN, Warsaw 2003	
	Supplementary literature	Logical circuits Zieliński C.: Fundamentals of digital circuits design, Wydawnictwo Naukowe PWN, Warsaw 2003  logic circuits Stefan Sieklicki - script from the subject of Logical Circuits	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	<p>- Carry out the operation (10101)<sub>2</sub> x (101)<sub>2</sub> the result reported in the decimal system,</p> <p>- The function f(d,c,b,a)= Π (0, 3, 5, 8, 12, 14, (2,11,13)) achieved using a a multiplexer 4/1 and NAND Gates.</p> <p>-Provide a table of trigger JK and D ,</p> <p>- Design the table in a logical network to build the NAND Gate</p> <p>- Design the synchronous presence or within binary digits given in the series in the number of ones is an even number other than zero, which should be indicated by setting the output in=1 for exactly one clock cycle.</p> <p>Enter in the solution:</p> <ol style="list-style-type: none"><li>1. Graf and a table to access/exit created based on graph tables and minimum</li><li>2. function triggers excitations for pursuing more bits of triggers JK</li><li>3. minimum output</li><li>4. function schematic diagram</li></ol>		

Work placement	Not applicable
