

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Mathematical Modelling Methods, PG_00047561								
Field of study	Automatic Control, Cybernetics and Robotics								
Date of commencement of studies	October 2024		Academic year of realisation of subject			2025/2026			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	3		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics					and			
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Zdzisław Kowalczuk						
	Teachers	prof. dr hab. i	nż. Zdzisław K	owalczu	k				
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	ject Seminar		SUM	
of instruction	Number of study hours	30.0	0.0	0.0	0.0		0.0	30	
	E-learning hours inclu	E-learning hours included: 0.0				-			
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic led in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		4.0		66.0		100	
Subject objectives	The aim of the course is to master the knowledge of methods of mathematical modeling of dynamic processes.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_W01] knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study		The student gets acquainted with the basic problems and methods of mathematical modeling of dynamic processes.			[SW1] Assessment of factual knowledge			
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices		The student understands the principles, methods and techniques of programming and the principles of creating computer software or programming microprocessor devices, as well as the organization of work of systems using computers			[SW1] Assessment of factual knowledge			
Subject contents Prereguisites	 Modeling and simulation 2. Methodology and models 3. Relations of modeling and simulation 4. Fidelity of modeling and coherence of simulation 5. Modeling: Real systems and basic models 6. Model reduction: integral models 7. Simulation: Rules of interaction 8. Prototype discrete procedure of simulation 9. Model structure and system reaction 10. State variables and state equations 11. Pseudo-random generators 12. Forming probability distributions 13. Analytical (physical) modeling 14. Types of variables; continuity and compatibility laws 15. Example (I) of analytical modeling 16. Example (II) of analytical modeling 17. Synthetic (mathematical) modeling 18. Examples of synthetic modeling 19. Integral modeling of systems 20. Structural representations 22. Differential equations 23. Modeling example (I) of differential equations 24. Modeling example (II) of a set of differential equations 25. Value and time scaling 26. Examples of scaling procedures 27. Modeling and simulation of continuous-time systems 28. Modeling and simulation of control systems 29. Simulation programs; program structure 30. Languages for modeling; simulation systems. No requirements 								
and co-requisites									

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade		
and criteria	Written exam	50.0%	100.0%		
Recommended reading	Basic literature	J. M. Smith: Mathematical modelling and digital simulation for scientists and engineers. Wiley, New York, 1977. H. Orłowski, J. Hawryluk: Modelowanie cyfrowe. WNT, Warszawa, 1971.
