

## Subject card

Subject name and code	Actuators in in Automatic Control, PG_00047564						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Marine Electronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jan Schmidt				
	Teachers		dr inż. Jan Schmidt				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		3.0		42.0	75
Subject objectives	The aim is to education specialists in the field of actuators in control systems, as well as preparing them for industrial jobs. The aim is also to prepare to take up studies on the second stage.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W03] knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	The student knows the structure and operation principles of actuators.	[SW1] Assessment of factual knowledge
	[K6_W05] Knows and understands, to an advanced extent, methods of supporting processes and functions, specific to the field of study	The student knows the methods of designing automation systems using actuators.	[SW1] Assessment of factual knowledge
	[K6_W02] knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	The student knows the operating principles of actuators.	[SW1] Assessment of factual knowledge
	[K6_W06] Knows and understands the basic processes occurring in the life cycle of devices, facilities and systems specific to a given field of study.	The student knows the operating principles of actuators.	[SW1] Assessment of factual knowledge
	[K6_W21] Knows and understands the basic methods of decision making as well as methods and techniques of design and operation of automatic regulation and control systems, computer applications for controlling and monitoring dynamic systems.	The student knows the methods of design and operation of automation systems using actuators.	[SW1] Assessment of factual knowledge
Subject contents	1. Functions of actuating devices in automatic control systems: notions of controller, actuator and power amplifier 2. Types, selection and exemplary constructions of controllers 3. Classification of actuators according to the kind of used energy 4. Exemplary construction solutions of pneumatic and hydraulic actuators. Types and properties of electric actuators. Power amplifiers for actuators 5. Principle of operation and classification of electric motors 6. Brushed direct current (DC) motors. Disc-armature "printed" motor 7. Brushless DC motors 8. Characteristics of self-excited DC motors 9. Losses in DC motors 10. Equivalent circuit diagram of the DC motor 11. Three-phase rotating field. Operating principle of three-phase alternative current (AC) induction motors 12. Classification and characteristics of three-phase AC induction motors 13. Synchronous AC motors 14. Methods of start-up and features of single-phase induction motors 15. Stepping motors – properties and classification 16. Variable-reluctance stepping motors 17. Permanent magnet and hybrid stepping motors 18. Modes of excitation of stepping motors 19. Dynamic characteristics of stepping motors 20. Power electronics elements (power field effect transistors – HEXFETs, IGBT transistors) 21. Specialized circuits for driving power MOSFETs and IGBT transistors 22. Continuous and bistate steering of electric energy flux 23. Electromagnetic relays and reed-relays. Drivers for relays and electromagnets 24. DC and AC solid-state (semiconductor ) relays 25. DC motors drives - control of rotation direction and torque 26. Converter topologies for DC motor drives 27. Brushless DC motors drive systems 28. Open-loop control of stepping motor 29. Closed-loop control of stepping motor 30. Microstepping drive 31. Inverters - fundamentals of operation 32. Asynchronous motors control		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	60.0%	100.0%
