GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Programming Techniques in Embedded Systems, PG_00053917						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2026/2027		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Automatic Control -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Paweł Raczyński					
	Teachers	dr inż. Paweł Raczyński					

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	15	3.0	32.0	50

Subject objectives	The aim of the course is to learn the rules and the acquisition of programming skills in embedded systems

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	The student knows the rules for creating software for embedded systems with PCs. The student knows the rules for using the PC104, VME and Compact PCI buses. The student knows the rules of practical use of Linux, Windows and other operating systems. The student knows the techniques of input and output interface software. The student knows the techniques of creating real-time software. The student knows the rules for implementing the elements of self-diagnosis of embedded computer systems.	[SW1] Assessment of factual knowledge
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	The student knows how to create software for embedded systems with PCs. Student and knows how to use PC104, VME and Compact PCI buses in practice. The student knows how to use the operating systems Linux, Windows and others. The student knows how to use the input and output interface software techniques in practice. The student knows and is able to put into practice the techniques of creating real-time software. The student knows how to use the diagnostic elements of embedded computer systems in practice.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment

Subject contents	1. Introduction into embedded systems 2. Embedded systems based on PC standard computers 3. Modular computers based on PC104 standard bus 4. Modular computers based on VME standard bus 5. Modular computers based on COMPACT PCI standard bus 6. Controlled object interface organization 7. Operating system in embedded systems: WINDOWS embedded, Linux, QNX 8. Embedded system software specificity 9. Object interface – using manufacturer handlers 10. Object interface – writing handler techniques 11. Hardware interrupt handling techniques: interrupt service routines, interrupt initiated task for service requests 12. Real time – techniques of implementation 13. Software handlers for standard communication interfaces 14. Microcontrollers in embedded systems 15. Operating systems for microcontrollers - Linux 16. Dedicated software – mini kernel techniques 17. Dedicated software – interrupt handling procedures technique 18. Dedicated software – software loop techniques 19. Microcontroller built-in resources handling techniques 20. Standard communication interface handling 21. Basics of self-diagnostics in embedded system software 22. Usage of microcontroller built-in diagnostic resources –JTAG interface 23. Embedded system examples
Prerequisites and co-requisites	No requirements

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	51.0%	60.0%
	Presentations	0.0%	10.0%
	Written exam	51.0%	30.0%
