

## Subject card

Subject name and code	Autonomous Systems of Expertise and Data Mining, PG_00047703						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Jakub Wszolek					
	Teachers	dr inż. Jakub Wszolek					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	2.0		18.0		50
Subject objectives	The aim of the course is to understand the construction and operation of autonomous systems and data mining expertise. In the lecture part of the course, students learn the different components of solutions based on modern systems analysis of large volumes of data. Theoretical considerations are enriched practical knowledge acquired from the laboratory classes.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	Student can write software that interacts with the database data.  Student is able to apply mechanism of analyzation of large data sets based on data mining methods	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K6_W03] knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student has a basic knowledge of high level programming languages.  Student is able to define pblem and implement appropriate procedures.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Student has basic information on the operation of the relational databases.  Student knows the basics of SQL.  Student has knowledge how to create the optimal database structures.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge	
Subject contents	<ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. Expert System <ol style="list-style-type: none"> <li>a. Definition and characteristics of an expert system</li> <li>b. The construction of expert systems</li> </ol> </li> <li>3. Knowledge Representation (OAV, semantic networks)</li> <li>4. The facts, rules</li> <li>5. Database - part of the expert system <ol style="list-style-type: none"> <li>a. The definition of the database</li> <li>b. The models architectures databases (relational, hierarchical, semantic network, distributed)</li> <li>c. Solutions NO-SQL (documentary, column, key-value, BigTable)</li> <li>d. Methods for the use of databases for storing knowledge</li> </ol> </li> <li>6. Evaluation of the quality of the expert system</li> <li>7. Algorithm Quinlan - help in acquiring knowledge</li> <li>8. RETE Algorithm</li> <li>9. The inference algorithm to the front, back, mixed</li> <li>10. Introduction to the Drools rule-based language</li> <li>11. Data Mining Systems <ol style="list-style-type: none"> <li>a. History</li> <li>b. The definition and structure of the system</li> <li>c. The practical use of</li> </ol> </li> <li>12. tables, decision trees</li> <li>13. Classification <ol style="list-style-type: none"> <li>a. The Bayesian probabilistic model</li> <li>b. The Naive Bayes classifier</li> <li>c. Uses</li> </ol> </li> <li>14. Cluster analysis <ol style="list-style-type: none"> <li>a. The hierarchical methods</li> <li>b. A group of k-means methods</li> <li>c. Uses</li> </ol> </li> <li>15. Practical implementations</li> </ol>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lecture	50.0%	60.0%
	lab	50.0%	40.0%
