

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Genetic Algorithms, PG_00047706							
Field of study	Automatic Control, Cybernetics and Robotics							
Date of commencement of studies	October 2024		Academic year of realisation of subject			2027/2028		
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	4		Language of instruction			Polish		
Semester of study	7		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname	Subject supervisor		dr inż. Tomasz Białaszewski					
of lecturer (lecturers)	Teachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours		Participation in didactic classes included in study olan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		3.0		42.0		75
Subject objectives	The main goal of the subject is to acquaint students with evolutionary algorithms. The lecture covers the following issues : evolutionary optimization techniques; encoding and decoding of parameters; methods of assessment of the fitness degree; selection methods of individuals; genetic operations; replacement strategies. scaling methods; niching methods. multi-objective optimization methods							

Learning outcomes	Course outcome	Subject outcome	Method of verification				
	[K6_W01] knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study	Student knows the problems associated with the implementation of numerical methods algorithms Student has knowledge of genetic and optimization algorithms. Student describes the basic optimization algorithms. Student defines the concepts used in genetic algorithms.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge				
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n- selection and application of appropriate methods and toolsn	Student is able to apply genetic algorithms in control theory problems Student explains the rules for assessing the solutions of multi- criteria tasks used in optimization methods	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment				
	[K6_W21] Knows and understands the basic methods of decision making as well as methods and techniques of design and operation of automatic regulation and control systems, computer applications for controlling and monitoring dynamic systems.	Student explains the basic mechanisms used in genetic algorithms. Student demonstrates the use of genetic algorithms	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge				
Subject contents	Organization of classes and principles of assessment Pielogical foundations of genetic approach						
	2. Biological foundations of genetic approach						
	 3. Optimization methods survey 4. Classification of search methods 5. Basis of genetic algorithms 						
	6. Encoding and decoding of parameters						
	7. Assessment of the fitness degree	e					
	8. Selection methods of individuals						
	 9. Genetic operations 10. Replacement strategies 11. Scaling methods 						
	12. Scheme theory						
	13. Niching methods						
	14. Multi-objective optimization problems						
	15. Genetic programming						
	16. Evolutionary algorithms in multi-objective parametrical i strukturalnej optimization of systems						
Prerequisites and co-requisites							
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Assessment in the form of exam	50.0%	60.0%				
	Execution of project	25.0%	40.0%

Example issues/ example questions/ tasks being completed	 Is it possible that a genetic algorithm without the mutation mechanism peaked global fitness function? The population consists of 4 individuals with the following fitness degrees: 169, 576, 64 and 361. Determine the scaled fitness degree of individuals using the linear scaling with the multiplication factor equal to 2. Assuming that an individual matching the pattern S has a degree of adaptation higher than the average of adapting the current population of 25%, determine in which generation scheme that monopolize population. Please give the principle of mutation for trialleic coding. List and briefly review the operations of crossing with floating-point representation. A solution space contains 2097152 points. Enter the lower and upper estimate of the number of patterns processed during the evolutionary cycle to encode binary and octal encoding. Assuming that the population consists of 50 individuals.
