

## Subject card

Subject name and code	Basics of Programming, PG_00047377						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Paweł Obszarski				
	Teachers		dr Paweł Obszarski  dr inż. Joanna Raczek  dr inż. Marcin Strąkowski  dr inż. Andrzej Marczał  dr inż. Katarzyna Karpienko  dr hab. inż. Iwona Kochańska  dr inż. Maciej Wróbel  dr inż. Bartłomiej Dec  mgr inż. Andrzej Jastrzębski  mgr inż. Jan Glinko  dr hab. inż. Robert Janczewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	20.0	0.0	65
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	65		10.0		50.0	125
Subject objectives	This course is an introduction to computer programming. Its primary objective is to teach solving of programming problems and writing programs using the C++ programming language.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	The student knows the constructs of a high-level programming language. He is able to interpret and analyze programs written in a high-level programming language. The student knows the rules for selection of programming methods and language constructs.	[SW1] Assessment of factual knowledge
	[K6_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Student writes simple programs to support the process of solving problems related to the field of his studies.	[SU1] Assessment of task fulfilment
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study	The student analyzes and solves basic programming problems. The student uses high-level programming language constructs that are syntactically and semantically correct. He writes and modifies programs in a high level language. Identifies and removes the causes of program malfunctions. He explains and can apply basic programming techniques.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment
Subject contents	<ol style="list-style-type: none"> <li>1. Introduction.</li> <li>2. Programming languages, alphabet, syntax and semantics. Translation.</li> <li>3. Classification of data types. Integer and floating point types. Arithmetic expressions and operators. Selected standard mathematical functions.</li> <li>4. Character type. Casting of types.</li> <li>5. Logical type. Logical operators and expressions.</li> <li>6. Input/output basics.</li> <li>7. Conditional statements (if, switch) and conditional expression.</li> <li>8. Iteration statements (for, while, do-while), nested iterations.</li> <li>9. Defining types. Constants. Enumerated type.</li> <li>10. One- and multi-dimensional arrays. Null-terminated strings.</li> <li>11. Basic rules for scope and lifetime of variables.</li> <li>12. Functions. Scope and lifetime of variables. Side effect.</li> <li>13. Passing parameters of a function.</li> <li>14. Pointer type and pointer arithmetics.</li> <li>15. Pointers for inter-function communication.</li> <li>16. Dynamic memory allocation.</li> <li>17. Basic dynamic data structures.</li> <li>18. Structures (records).</li> <li>19. Data structures using records and their applications.</li> <li>20. Applications of dynamic data structures (stacks, queues, graph structures)</li> <li>21. Introduction to object oriented programming.</li> <li>22. Defining classes (constructor, destructor, data and function members).</li> <li>23. Applications object-oriented programming paradigm.</li> <li>24. Input/output streams classes. Input/output formatting.</li> <li>25. Processing files.</li> <li>26. Applications of recurrence ( e.g., divide and conquer, greediness, dynamic programming).</li> </ol>		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final test	50.0%	40.0%
	Project assignments (1-2)	50.0%	30.0%
	Programming lab assignments (1-3)	50.0%	30.0%

Recommended reading	Basic literature	<p>[1] Grębosz J., Symfonia C++ Standard (tom 1 i 2), Editions 2000, Krakow 2008.</p> <p>[2] Borowiecki Piotr, Podstawy programowania - materiały do wykładu.</p> <p>[3] Materiały przygotowujące do laboratorium z Podstaw programowania (opracowanie zespołowe).</p> <p>For participants of the course, [2] and [3] are available at eNauczanie PG platform.</p>
