

Subject card

| | | | | | | | |
|---|--|--|---|-------------------------------------|--|------------|-----|
| Subject name and code | Databases Basics, PG_00047534 | | | | | | |
| Field of study | Electronics and Telecommunications | | | | | | |
| Date of commencement of studies | October 2024 | | Academic year of realisation of subject | | 2024/2025 | | |
| Education level | first-cycle studies | | Subject group | | Obligatory subject group in the field of study | | |
| Mode of study | Full-time studies | | Mode of delivery | | at the university | | |
| Year of study | 1 | | Language of instruction | | Polish | | |
| Semester of study | 2 | | ECTS credits | | 2.0 | | |
| Learning profile | general academic profile | | Assessment form | | assessment | | |
| Conducting unit | Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr inż. Adam Bujnowski | | | | |
| | Teachers | | dr Tomasz Neumann | | | | |
| | | | mgr inż. Magdalena Madej | | | | |
| | | | mgr inż. Natalia Szarwińska | | | | |
| Lesson types and methods of instruction | | | dr inż. Adam Bujnowski | | | | |
| | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 15.0 | 0.0 | 15.0 | 0.0 | 0.0 | 30 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | | Participation in consultation hours | | Self-study | SUM |
| | Number of study hours | 30 | | 2.0 | | 18.0 | 50 |
| Subject objectives | Basic terms: database, data model, database management system. Fundamental data models - flat file, hierarchical, networking and relational data models. Designing of the relational databases. Management of the databases using SQL. Relational algebra. Functions, triggers in the modern DBMS. Transactions. Connection to the database from procedural languages. | | | | | | |

| | | | |
|--|--|--|---|
| Learning outcomes | Course outcome | Subject outcome | Method of verification |
| | [K6_W01] knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study | Student knows basics of mathematical set theory Student applies basic operations on sets | [SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge |
| | [K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices | Student knows basics of the SQL language Student applies SQL statements within languages like C/C++ and PHP | [SW3] Assessment of knowledge contained in written work and projects |
| | [K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study | Student knows and identified data models Student knows how to design relational database | [SU1] Assessment of task fulfilment |
| Subject contents | Principal terms - data, information, knowledge, database, DBMS, data model. Layered model of database system, Data model vs data structure, Flat databases, Relation between entities, hierarchical model, network data model, XML as a hierarchical database, Relational data model - structure of the data, Data integrity in relational databases, Graphical notations of the RDB structure, Normalisation, Designing of the relational databases, SQL - genesis, usage of the SQL, classification. Data definition language, Data types in SQL, Data manipulation language, tuple selection statements, SELECT - data retrieval, SQL - privileges, user and database management, Aggregate functions, User defined functions, triggers, transactions, additional SQL forms - comments, Backup copies of the data, Data access methods - using procedural languages. Object data model. | | |
| Prerequisites and co-requisites | Basic skills in computing. Programming in C/C++ | | |
| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
| | laboratory achievements | 50.0% | 60.0% |
| | final writing | 50.0% | 40.0% |
| Recommended reading | Basic literature | Davies, Database systems Matthews Stones, Databases and PostgreSQL Rumiński, Bujnowski, | |
| | Supplementary literature | Sharon Allen, Projektowanie baz danych, Helion www.postgresql.org | |
| | eResources addresses | Adresy na platformie eNauczanie: | |
| Example issues/ example questions/ tasks being completed | Design the database structure of (shop / library etc...) Using the SQL language implement database, manage data and analyse data with result presentation Using PHP and www technology create the interface to the database | | |
| Work placement | Not applicable | | |
