

Subject card

Subject name and code	Analog Integrated Circuits, PG_00048108						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2027/2028		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Microelectronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Jacek Jakusz					
	Teachers	dr hab. inż. Jacek Jakusz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the course is to provide knowledge of design analog integrated circuits and gain practical skills in design and performance verification of analog circuits using CAD software.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W32] Knows the parameters, functions and methods of analysis, design and optimization of analogue and digital circuits and electronic systems	The student lists and classifies and describes the basic technologies of IC manufacturing. The student recognizes and describes basic functional blocks of analogue integrated circuits. The student recognizes and describes basic circuits: operating amplifiers, transconductance amplifiers and comparators. The student calculates basic parameters of analog amplifying circuits.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student calculates parameters of simple analog circuits. Student designs topographies of simple analog circuits. The student simulates and evaluates parameters of analog circuits.			[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		

Subject contents	1. CMOS, BJT & BiCMOS analog integrated circuits introduction 2. Modeling of CMOS and BJT devices 3. Passive components in analog integrated circuits 4. Basic building blocks: MOS switches, MOS Current Sinks/Sources 5. Basic building blocks: current mirrors, MOS resistors, active loads 6. Basic building blocks: single stage amplifiers 7. Basic building blocks: output amplifiers/buffers 8. Voltage and current reference circuits 9. Operational amplifiers - design principles and compensation 10. Architecture of two-stage CMOS operational amplifier 11. Design procedure of two-stage CMOS operational amplifier 12. High-performance CMOS operational amplifiers - examples 13. Operational transconductance amplifiers OTA linearization methods 14. OTA realization - examples 15. Current conveyors and current amplifiers 16. CMOS comparators			
Prerequisites and co-requisites	No requirements			
Assessment methods and criteria	Subject passing criteria		Passing threshold	Percentage of the final grade
	Midterm colloquium		50.0%	60.0%
	Practical exercise		50.0%	40.0%
Recommended reading	Basic literature		D. Johns, K. Martin: Analog Integrated Circuit Design, John Wiley & Sons, Inc. P.E. Allen, D.R. Holberg: CMOS Analog Circuit Design, Oxford University Press Jacek Izydorczyk: Pspice. Komputerowa symulacja układów elektronicznych, Helion	
	Supplementary literature		No requirements	
	eResources addresses		Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	Design of a two-stage CMOS operational amplifier.			
Work placement	Not applicable
