GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Systems Modelling and Analysis, PG_00047715		
Field of study	Informatics		
Date of commencement of studies	October 2024	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Part-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	6.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Bogdan Wiszniewski	
	Teachers	prof. dr hab. inż. Bogdan Wiszniewski	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	12.0	0.0	12.0	12.0	0.0	36
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	36	10.0	104.0	150

Subject objectives	The goal of the course is to prepare students for performing jobs of system analyst and business analyst.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_U41] can select methods of modelling and analysis of information systems and applications using selected elements of theoretical computer science and modern programming tools	Student can select proper techniques and tools for software modeling and business analysis	[SU1] Assessment of task fulfilment
[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	Student can select proper techniques and tools for software modeling and business analysis	[SU2] Assessment of ability to analyse information
[K7_W42] Knows and understands, to an increased extent, the principles and trends in the analysis and design of local and distributed IT systems and the basics of computer modeling and computerization of complex cognitive and decision-making processes.	Student knows and understands areas of system analysis and business analysis as well as selected advanced approaches to software modeling.	[SW1] Assessment of factual knowledge
[K7_U08] while identifying and formulating engineering tasks specifications and solving these tasks, can: - apply analytical, simulation and experimental methods, - notice their systemic and non-technical aspects, - make a preliminary economic assessment of suggested solutions and engineering work	Student can apply UML in systems modeling.	[SU1] Assessment of task fulfilment

Subject contents

Introduction to modeling, UML
Use case diagram
Class diagram - elements and application of class diagrams in system analysis
Dynamic models in UML
Other structure diagrams
Application of UML models in software engineering

UML tools and their usability
Application of analysis patterns
Introduction to MDA/MDE
Domain specific modeling
Business modeling
Selection of proper modeling methods
Business analyst

Prerequisites and co-requisites

No requirements

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Lab	50.0%	33.0%
Project	50.0%	17.0%
Written exam	50.0%	50.0%
