

Subject card

Subject name and code	, PG_00061956								
Field of study	Environmental Engineering								
Date of commencement of studies	October 2024		Academic year of realisation of subject			2024/2025			
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Part-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	2		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Sanita	ry Engineering	-> Faculty of C	Civil and Enviro	nmenta	l Engine	eering		
Name and surname	Subject supervisor dr hab. inż. Sylwia Fudala-Książek								
of lecturer (lecturers)	Teachers								
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	oject Seminar		SUM	
	Number of study hours	10.0	10.0	0.0	10.0		0.0	30	
	E-learning hours inclu	uded: 0.0							
Learning activity and number of study hours	Learning activity Participation in classes include plan					Self-study		SUM	
	Number of study hours	30		6.0		70.0		106	
Subject objectives	The aim of the course is to introduce the subject of mechanical ventilation and air conditioning. In particular, with the knowledge of ventilation and air conditioning and the shaping of the indoor environment, the basics of acoustics, current legal regulations and standards related to the subject, installation materials and criteria for their selection, design methods and tools supporting design, methods and technologies for the execution of the installations in question, as well as related non-technical considerations.								
Learning outcomes	Course out	ome Subject outcome				Method of verification			
	K7_U03		The student produces design documentation for a mechanical ventilation system, including technical description, calculations and drawings.			[SU1] Assessment of task fulfilment			
	K7_U10		The student designs a mechanical ventilation system in a public building.			[SU1] Assessment of task fulfilment			
	[K7_W11] has knowledge to analyze, evaluate and optimize processes, objects and systems of environmental engineering and knows the principles of rational energy management and resources		The student is able to use concepts and specialist language in the field of ventilation and airconditioning. The student is able to carry out technical and economic analysis of selected mechanical ventilation solutions. They will be able to determine the rational source of heat and cold.			[SW1] Assessment of factual knowledge			
	K7_W06		The student lists and defines the concepts of media flow in sanitary, thermal or energy systems. Characterises methods and equipment for media flow in sanitary, thermal or energy systems, including mechanical ventilation.			[SW1] Assessment of factual knowledge
