

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Surveying I (team project), PG_00061805								
Field of study	Geodesy and Cartography								
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025				
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction		Polish				
Semester of study	2		ECTS credits		7.0				
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering								
Name and surname	Subject supervisor	dr inż. Marek Zienkiewicz							
of lecturer (lecturers)	Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Project	t	Seminar	SUM	
of instruction	Number of study hours	30.0	0.0	25.0	20.0		0.0	75	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	didactic Participation in consultation hours		Self-study SUM		SUM		
	Number of study hours	75		10.0		90.0		175	
Subject objectives	The aim of the course is to provide the knowledge of the methodology of horizontal and vertical measurements for the purposes of large-scale map developing, including the theoretical knowledge in the field of both measurement technology as well as standards and technical guidelines resulting from applicable regulations. Students learn the specifics of conducting extensive geodetic works as part of teamwork, which is necessary in order to complete a complex and comprehensive geodetic project.								
Learning outcomes	Course outcome		Subject outcome		Method of verification				
	[K6_U11] is able to develop geodetic documentation and perform individually as well as in a group, field and field surveying surveys		The student: - performing of situational and height maps, - completing measurement and technical documentation.		[SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools				
	[K6_W07] has a well-established knowledge and understands concepts in the field of engineering geodesy including the use of calculations and measurements methods carried out with the use of geodetic instruments and photogrammetric and remote sensing technologies related to geodetic support for investment, surveying and inventory measurements and photogrammetry with remote sensing		<ul> <li>situational measurements by rectangular offset and by the use of tachymetry,</li> <li>height measurements by the use of tachymetry, geometric leveling and leveling by the method of distributed points,</li> <li>adjustment of surveyed polygons with the approximate method,</li> <li>calculates situational and height coordinates.</li> </ul>		contained in written work and projects				

Subject contents	Lectures:							
	<ol> <li>Historical aspect of surveying works</li> <li>Systems and reference datumss used in geodesy</li> <li>Plane coordinate systems</li> <li>High systems and reference datums</li> <li>Physical implementation of geodetic coordinate systems</li> <li>Carrying out surveying works related to the development of situational and height maps</li> <li>Introduction to the issue of cartographic projections</li> <li>Basic knowledge in the field of adjustment of geodetic observations</li> <li>The process of mapping and editing the situational and height map</li> </ol>							
	Laboratories - Development of a situational and height map:							
	1. Initial analysis of the measuring object and verification of the location of existing horizontal and height reference points,							
	2. Designing the location of reference points and their stabilization,							
	3. Making sketches of the reference points and its topographic descriptions,							
	4. Situational measurement of geodetic polygons,							
	5. Height measurement of geodetic polygons,							
	6. Adjustment of geodetic polygons by approximate method,							
	7. Situational-height measurement of terrain details,							
	8. Calculation of situational and height coordinates of measurement pickets,							
	9. Performing of situational and height map,							
	10. Making a technical report.							
Prerequisites and co-requisites	Ability to handle traditional and modern geodetic instruments. Basic knowledge of the geodetic softwares that can be used for measurements processing and results visualization.							
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade					
	The correct performance of the report on situational-height measurements.	100.0%	100.0%
