

Subject card

Subject name and code	Informatics in geodesy , PG_00061846						
Field of study	Geodesy and Cartography						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Paweł Wysocki				
	Teachers		dr inż. Wojciech Artichowicz				
			dr inż. Krzysztof Szarf				
			dr inż. Natalia Lasowicz				
			dr inż. Daniel Burkacki				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The aim of this course is to acquaint students with the following subjects in the field of computer science: 1.overview of databases used in geodesy 2.introduction to progamming in the Matlab/Octave/Scilab environment						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W04] has knowledge and understands the concepts of projection with elevations, Monge's and middle (perspective), has basic knowledge and understands the concepts of engineering graphics needed to work with CAD (Computer Aided Design) software in accordance with the standards and principles of geodesy, construction and IT including computer network technologies, databases and programming as well as surveying software		The student knows and understands the principles of creating databases used to perform basic geodetic calculations		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] is able to develop a simple algorithm and prepare a simple program in object-oriented language taking into account the geodetic specifics and the specificity of spatial information systems		The student is able to design and write a simple script and functions in the Matlab / Octave / Scilab environment in terms of the development of geodetic measurements, as well as their visualization using 2D and 3D charts.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		

Subject contents	<p>I. Databases - basic issues</p> <p>1. Introduction, database structure.</p> <p>2. Basics of SQL - creating tables, modifying, updating.</p> <p>3. Queries to the database, filtering, sorting, conditional queries, analytical analysis.</p> <p>4. Spatial (cartographic) databases - reading, updating and analyzing data.</p> <p>II. Lectures on programming in the Matlab/Octave/Scilab environment:</p> <p>1. Introduction to the Matlab/Octave/Scilab environment</p> <p>2. Language syntax</p> <p>3. Programming</p> <p>4. Working with files</p> <p>5. Computer algebra system</p> <p>6. Computational geometry</p> <p>III. SPREADSHEET</p> <p>1. Principles of working in a spreadsheet. Cell and cell addressing.</p> <p>2. Formulas, relative and absolute references. Using named ranges. Array formulas.</p> <p>3. Using conditional formatting.</p> <p>4. Data filtering (autofilter, standard and advanced filter).</p> <p>5. Solving equations and systems of nonlinear equations (Solver add-in).</p> <p>6. Preparing sheets for distribution: protecting the sheet. Pivot tables.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	completion of the subject-specific tasks	60.0%	100.0%
