

Subject card

Subject name and code	QUANTITATIVE METHODS IN THE INTERNATIONAL ECONOMY, PG_00058453						
Field of study	Economics, Economic Analytics						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Katedra Statystyki i Ekonometrii -> Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Aleksandra Kordalska					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	30.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Describes the possibilities of quantitative methods application in terms of their selection and collecting reliable data						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U06] acquires new knowledge by planning lifelong learning strategies		acquires new knowledge necessary to conduct analyses in international economics		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_K03] demonstrates the ability to think critically and analytically and integrates knowledge from many disciplines, acting in an entrepreneurial manner		shows a critical approach to reliable data sources selection necessary to conduct analyses in international economics		[SK5] Assessment of ability to solve problems that arise in practice		
Subject contents	Introduction to the course, quantitative versus qualitative approach to analyses in the field of international economics, examples of applications and the problem of choosing a research method Introduction to the software - the use of selected modules of the STATA package (and / or R packages) with examples of applications in international economics Macroeconomic, sectoral, and microeconomic sources of data for international analyses and examples of their use Merging economic data that come from different sources Value added in exports - methods of gross exports decomposition Functional specialisation in international trade - a way of identification Creating a database with two-level (country-year) and multi-level (e.g. country-section-year) identification Calculation of macroeconomic and sectoral indicators Methods of an initial analysis of the created databases (descriptive statistics, graphical methods of presenting multidimensional data, outliers) Preliminary examination of the relationship between data, selection of variables for analysis: exo- and endogenous variables - illustration on the example of determinants of economic growth One- and multi-dimensional analyses on the example of the absolute and conditional convergence model Bilateral data and gravity model for international trade Preparing of the project						
Prerequisites and co-requisites	macroeconomics, microeconomics, statistics, econometrics						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	project		60.0%		100.0%
