

## § GDAŃSK UNIVERSITY § OF TECHNOLOGY

## Subject card

Subject name and code	ECONOMETRICS, PG_00058562								
Field of study	Economic Analytics								
Date of commencement of studies	October 2024		Academic year of realisation of subject			2025/	2025/2026		
Education level	first-cycle studies		Subject group			field c	Obligatory subject group in the field of study Subject group related to scientific		
						research in the field of study			
Mode of study			Mode of delivery			at the	at the university		
Year of study	2		Language of instruction				Polish		
Semester of study	4		ECTS credits			5.0	5.0		
Learning profile	general academic profile		Assessment form			exam	exam		
Conducting unit	Katedra Statystyki i E	konometrii -> F	aculty of Mana	agement and E	Conomi	cs			
Name and surname	Subject supervisor		dr hab. Michał Pietrzak						
of lecturer (lecturers)	Teachers								
Lesson types and methods of instruction	Lesson type Number of study	Lecture 16.0	Tutorial 0.0	Laboratory 16.0	Projec	ct	Seminar 0.0	SUM 32	
or instruction	hours	10.0	0.0	10.0	0.0		0.0	52	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation i classes incluc plan		Participation consultation		Self-study		SUM	
	Number of study hours	32		10.0		83.0		125	
Subject objectives	Creates econometric models to analyze economic processes.								
Learning outcomes	Course outcome		Subject outcome				Method of verification		
	[K6_U05] designs innovative solutions to complex problems obtaining economic and socially valuable results		recognizes methods used for estimation and verification of econometric models, choosing the method to fit the defined problem			[SU4] Assessment of ability to use methods and tools			
	[K6_W05] integrates data from multiple sources to analyze complex economic problems		analyzes cause and effect relationships occurring in economic processes			[SW3] Assessment of knowledge contained in written work and projects			
Subject contents	An econometric model and its components. Simple and multiple regression. Steps in building an econometric model. Parameter estimation of linear econometric model. Method of least squares (LSM) estimation of linear econometric model. Stochastic assumptions in an econometric model. Economic verification of an econometric model. Statistical verification, assessment of the degree of model fit and testing of stochastic properties of the model. Estimation of a linear regression model using the method of moments and maximum likelihood. Multiplicative models - properties and methods of estimating parameters. Autocorrelation property of the random component - causes, effects, measurement, testing and methods of removing causes. Heterocedasticity of a random component. Generalized least squares method (GLS). Parameter estimation under autocorrelation and heteroskedasticity of the random component. Cause and effect compatible model. Econometric forecasting based on an econometric model.								
Prerequisites and co-requisites	mathematics, macroeconomics, microeconomics, statistics, mathematical statistics								
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade				
	exam		60.0%		50.0%				
	colloquium (lab)	60.0%			50.0%

Example issues/ example questions/ tasks being completed	Consider the following inflation model: $\inf_{t=1} = 8,0 + 0,6 \inf_{t=1} -0,7 r_t + t$ , where: $\inf_{t=1} n_{t=1} = 0$ where: $\inf_{t=1} n_{t=1} = 0$ where: $\inf_{t=1} n_{t=1} = 0$ where: $\inf_{t=1} n_{t=1} = 0$ and $\inf_{t=1} n_{t=1} = 0$ . Identify the short-term effect of the impact of the interest rate on the level of inflation and the time-lagged inflation level.					
Work placement	Not applicable
