

Subject card

| | | | | | | | |
|---|---|--|-------------------------------------|------------|--|---------|-----|
| Subject name and code | Chemical and Biotechnological Apparatus, PG_00054697 | | | | | | |
| Field of study | Biotechnology | | | | | | |
| Date of commencement of studies | October 2024 | Academic year of realisation of subject | | | 2025/2026 | | |
| Education level | first-cycle studies | Subject group | | | Obligatory subject group in the field of study Subject group related to scientific research in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 2 | Language of instruction | | | Polish | | |
| Semester of study | 3 | ECTS credits | | | 4.0 | | |
| Learning profile | general academic profile | Assessment form | | | exam | | |
| Conducting unit | Department of Energy Conversion and Storage -> Faculty of Chemistry | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr hab. inż. Monika Wilamowska-Zawłocka | | | | | |
| | Teachers | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 0.0 | 15.0 | 0.0 | 45 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | SUM | |
| | Number of study hours | 45 | 10.0 | | 45.0 | 100 | |
| Subject objectives | Student learns about the classification of industrial processes (mechanical, thermal and diffusion) and construction and operation of devices for their implementation. The equations describing fluid dynamics will be discussed. The construction and function of apparatus i.e. pumps, pipelines, tanks, reactors and bioreactors, conveyors, grinding machines, apparatus for separation and mixing processes, heat exchangers, drying, distillation, rectification and mass transfer devices will be presented. The devices will be discussed in terms of their usefulness in the biotechnological industry. | | | | | | |
| Learning outcomes | Course outcome | Subject outcome | | | Method of verification | | |
| | K6_W10 | The student knows industrial processes and technological installations. Based on calculations, he can choose the appropriate apparatus for industrial installations. | | | [SW3] Assessment of knowledge contained in written work and projects | | |
| | K6_U10 | A student knows technological processes and industrial installations. Based on calculations and assumptions, he can select the right device and construction material for various chemical substances. | | | [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject | | |
| | K6_U09 | The student has knowledge about devices for the separation of liquid-liquid, liquid-solid and solid-gas systems used in the chemical and biotechnology industries. | | | [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject | | |
| Subject contents | The content of the classes includes the presentation of necessary information relating to construction and operational principles of conventional machines and apparatuses generally applied in the chemical and biotechnological industries. The lecture covers discussion of the relations between the theory of devices operation and their construction supplemented with drawings. The intention is to give sufficient theoretical matter to provide the student with a satisfactory understanding of the subjects discussed. | | | | | | |
| Prerequisites and co-requisites | Preliminary requirements: basic knowledge of: Mathematics, Physics, Chemistry, Engineering Graphics, Operational Use of Computer. | | | | | | |

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|---------------------------------|---|--|-------------------------------|
| | Written tests, project work, written exam | 60.0% | 40.0% |
| | Written exam | 60.0% | 60.0% |

Example issues/
example questions/
tasks being completed

Issues discussed:

- Fluid dynamics - equations describing fluid dynamics, flow resistance in pipelines.
- Pipelines and pipeline armature for chemical processes
- Pumps - standard and special pumps, their construction and application, pump sealing
- Compressors and fans
- Transport of materials - conveyors
- Storage tanks - materials and components of containers depending on the type of substance stored
- Mixing processes in the chemical industry, construction of mixers, types of mixers, mixing efficiency and methods of vortex elimination
- Reactors and bioreactors
- Shredding processes - construction of equipment and energy consumption of operations depending on the required degree of fragmentation
- Separation of heterogeneous systems
- Heat exchange - heat transfer coefficients, heat exchangers, evaporators, crystallizers, dryers.
- Mass exchange - adsorption and absorption columns
- Distillation and rectification processes

Sample questions:

List and describe the differences between displacement and centrifugal pumps.

Why are the pumps connected in series / parallel?

How can the capacity of a centrifugal / piston pump be adjusted?

Which pumps are suitable for transferring finely structured liquids and slurries (without damaging the liquid structure)?

List a pipeline cleaning methods.

How to reduce / eliminate circular motion in mixers?

List the types of bioreactors.

Specify the device (s) best suited for separating a three-phase liquid-liquid-solid system.

Why are heat exchangers connected in series / parallel?

| | |
|----------------|---|
| | Why are evaporators often combined in series? |
| Work placement | Not applicable |

Document generated electronically. Does not require a seal or signature.
