

Subject card

Subject name and code	Physics, PG_00060842						
Field of study	Chemical Technology						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Physics of Electronic Phenomena -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Waldemar Stampor				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		85.0	150
Subject objectives	<p>The main objective of the course is:</p> <p>acquire a certain amount of knowledge of general physics,</p> <p>teach thinking in terms of cause-and-effect relationships and to understand the limitations imposed by the fundamental laws of physics,</p> <p>acquire problem-solving skills encountered in engineering work.</p>						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W01] has knowledge in mathematics, including the solution of equations and inequalities involving elementary functions, differential and integral calculus, elements of vector analysis, statistics, optimisation and numerical methods, has basic knowledge in selected branches of physics, useful for the description and analysis of technological processes		The student has the ability to write and read physical formulas, understand the basic physical laws, correctly apply the acquired knowledge in the field of electromagnetism, optics, nuclear and solid state physics to solve various technical problems		[SW1] Assessment of factual knowledge		
	[K6_U02] is able to operate typical laboratory apparatus and conduct analyses related to materials testing		Knows professional terms within the scope of general physics, able to do a report containing graphs and tables of laboratory exercises		[SU1] Assessment of task fulfilment		
	[K6_U01] is able to acquire information from literature, databases and other appropriately selected sources, also in English; is able to integrate information obtained, interpret it and make conclusions, formulate and justify opinions		The student is able to critically analyze information obtained from textbooks, the Internet and other sources.		[SU2] Assessment of ability to analyse information		

Subject contents	Electrodynamics . Electromagnetic induction . Faraday's law of mutual induction and self-induction, inductance of an electric circuit . Maxwell's equations for a vacuum. Electromagnetic oscillations in an LC circuit . OPTICS . The spectrum of electromagnetic waves. Geometric optics : the law of reflection and refraction of light , prism . Wave optics : polarization , diffraction and interference of waves , diffraction grating . The spectral analysis of light, optical spectrometer . Quantum optics : thermal radiation , photoelectric effect, properties of photons. ATOMIC PHYSICS. Bohr's model of the hydrogen atom. Vector model of the atom and quantum numbers , spin-orbit coupling and fine structure of spectral lines , the Zeeman effect , electron magnetic resonance . X-rays. Lasers: stimulated emission , lasing conditions , types of lasers , applications. Waves of de Broglie and electron microscope . The Schrödinger equation : the wave function, tunneling. Tunneling microscope.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Oral exam	50.0%	25.0%
	Written exam	50.0%	25.0%
	Tutorials	50.0%	25.0%
	Lab	50.0%	25.0%

	eResources addresses	Adresy na platformie eNauczanie:	
	Example issues/ example questions/ tasks being completed	1 Passage of light through a prism and a diffraction grating. Optical spectrometer 2 Thermal radiation. Wien's displacement law and Stefan-Boltzmann law. The weight loss by radiation from the Sun 3 Einstein's equation for the photoelectric effect. What is potential of the copper ball (W = 4.5eV) illuminated by UV radiation with a wavelength of 250nm? 4 Bohr's model of the atom of hydrogen. Bohr orbits. Rydberg formula. Bohr magneton. Calculate the wavelength of the red line of the Balmer series 5 Quantum numbers. Orbital, spin and total angular momentum. Spatial quantization of angular moments 6 Spin-orbit coupling. Fine structure (double) yellow line of sodium 7. Zeeman effect. The red line of cadmium in the magnetic field 8 Precession of a magnetic dipole in the magnetic field. Electron and nuclear magnetic resonance 9 Waves of matter (de Broglie). Wavelength of speeding electron. The electron microscope 10 The wave function and the probability density. The Schrodinger equation 11 Tunneling and tunneling microscope	
Work placement	Not applicable
