Subject card

| Subject contents | Systems of linear equations. Cramer patterns. The rank of the main and completed matrix. KroneckerCapelli theorem. Gaussian elimination method. <br> Functions of two variables: Limit and continuity of a function of several variables. Partial derivatives. Total differential. <br> Taylors formula. Maxima and minima of a function of several variables. <br> Multiple integrals: Normal and regular area. Double and triple integral. Change of variables - polar, cylindrical and spherical coordinates. Examples of applications. <br> Elements of field theory: scalar and vector fields. Gradient, divergence, rotation. <br> Ordinary differential equations: First order linear differential equations. Linear differential equations order $n$ with constant coefficients. <br> Calculus of probability: Discrete and continuous random variable, distribution function, expected value and variance of a random variable. Basic distribution of a random variable. |  |  |

| :--- | :--- | :--- |
| Example issues/ <br> example questions/ <br> tasks being completed | Examine the convergence of series ... using the appropriate convergence criterion. |  |
| Discuss the solvability of the given system of equations ... . |  |  |
| Find local extrema of the given function $f(x, y)=\ldots$. |  |  |
| Using cylindrical or spherical coordinates, calculate the given triple integral ... |  |  |
|  | Determine the potential of the vector field ... |  |
| Using the prediction method, solve the second order linear differential equations. |  |  |
| Calculate the expected value and variance of the given random variable of the continuous type ... |  |  |
