

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Physics, PG_00060837							
Field of study	Chemical Technology							
Date of commencement of studies	October 2024		Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of de	livery		at the university		
Year of study	1		Language of instruction			Polish		
Semester of study	1		ECTS credits			4.0		
Learning profile	general academic pro	ofile	Assessment form			assessment		
Conducting unit	Department of Physic	s of Electronic	Phenomena ->	Faculty of Ap	plied Ph	iysics a	and Mathemat	ics
Name and surname	Subject supervisor		dr hab. inż. Waldemar Stampor					
of lecturer (lecturers)	Teachers		dr inż. Daniel Pelczarski					
			dr hab. inż. Waldemar Stampor					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	15.0	0.0	0.0		0.0	45
	E-learning hours inclu							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study SUM		SUM
	Number of study hours	45		10.0		65.0		120
Subject objectives	The aim of the course is to acquire specific knowledge in the field of general physics and to acquire appropriate skills to predict the course of physical phenomena based on known laws of physics, necessary to solve future engineering problems							
Learning outcomes	Course outcome		Subject outcome		Method of verification			
	[K6_W01] has knowledge in mathematics, including the solution of equations and inequalities involving elementary functions, differential and integral calculus, elements of vector analysis, statistics, optimisation and numerical methods, has basic knowledge in selected branches of physics, useful for the description and analysis of technological processes		A student gains the basic knowledge in the field of mechanics and electromagnetism defines basic concepts, gives definitions of physical quantities and explains physical laws.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	information from literature, databases and other appropriately selected sources, also in English; is able to integrate information obtained, interpret it and make conclusions, formulate and justify opinions		A student -correctly writes and reads physical formulae, - distinguishes scalar and vector quantities, -understands fundamental physical laws, - predicts the following course of actions according to the physical laws, -sets up and solves physics problems in mechanics and electromagnetism. Can critically analyze information obtained on the basis of textbooks, the Internet and other sources.			[SU2] Assessment of ability to analyse information

Determination of the moments of inertia of molecules	Subject contents	ABOUT PHYSICS. Physical quantities and their units . Elements of vector algebra . MECHANICS . Kinematics of a particle : rectilinear motion , curvilinear motion, Newton's laws of motion. Dynamics of rigid body : the moment of inertia, principal axes , Steiner's law, torque and angular momentum , equation of rotational motion, gyroscopes and precession. Consevation laws in mechanics . Oscillations and mechanical waves . Free, damped and forced vibrations. Mechanical resonance . Beats . Decomposition of periodic oscillations into the harmonic components . Types of waves. Equation of harmonic plane wave motion . Wave velocity . Examples of diffraction and interference of waves. Standing waves . Doppler effect. Sound intensity level . ELECTROMAGNETISM. Electric field . Coulomb's law . The intensity of the electric field . The electrical potential . The relationship between the intensity of the electric capacitor. Magnetic field. Magnetic induction vector . The Lorentz force . Biot- Savart law . Electrodynamic force . The interaction of two straight linear wires carrying an electric current. Magnetic dipole and its behavior in an external magnetic field.						
and criteria initiam tests 50.0% 100.0% Recommended reading Basic literature 1. D.Haliday, R.Resnick, J.Walker. Podstawy fizyki. T.1 - T.5; PWN, Warszawa 2003. 2. Cz. Bobrowski. Fizyka. Krótki kurs.
