

Subject card

Subject name and code	Basics of Image Processing, PG_00047790						
Field of study	Biomedical Engineering						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jacek Rumiński				
	Teachers		prof. dr hab. inż. Jacek Rumiński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the course is to familiarize students with selected issues relating to computer graphics and image processing, and developing the ability to use methods of analysis and image processing in the implementation of tasks in the field of biomedical engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	Student knowledge gained: - The ability to image acquisition for archiving and subsequent analysis,	[SW1] Assessment of factual knowledge
	[K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Student knowledge gained: - Select of appropriate techniques to improve the quality of images, - Use basic methods of digital image processing techniques, - to apply digital image processing techniques to build a realistic three-dimensional scenes,	[SW1] Assessment of factual knowledge
	[K6_U53] can apply equipment used in biomedical diagnostics	Student skills gained: - The ability to image acquisition for archiving and subsequent analysis, - Ability to selection of appropriate techniques to improve the quality of images, - Use basic methods of digital image processing techniques, - The ability to apply in practice certain methods of processing and image analysis used in scientific applications, particularly in the field of biomedical engineering, - The ability to apply digital image processing techniques to build a realistic three-dimensional scenes, - Practical skills to prepare for professional graphic materials for print and web publishing, multimedia.	[SU1] Assessment of task fulfilment
Subject contents	1. Image perception and cognition 2. Models and representation of images 3. Image acquisition and synthesis 4. Typical images, image sources and image acquisition devices 5. Color spaces 6. Single-pixel based image processing 7. Multiple-pixel based image processing. Image algebra 8. Application of mathematical morphology 9. Image enhancements: convolution and filtration 10. Image enhancements: nonlinear filtration 11. Image enhancements: histogram transformations 12. Image enhancements: histogram equalization and matching 13. Geometry transformation: rigid and non rigid transforms 14. Geometry transformation: affine and perspective methods 15. Image sequences: animations and virtual reality 16. 2D and 3D vector graphics 17. Processing of 3D graphics - textures: synthesis and rendering 18. Processing of 3D graphics - controlling of lighting		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	50.0%	50.0%
	Midterm colloquium	50.0%	50.0%
Recommended reading	Basic literature	A. Watt, 3D Computer Graphics, Addison Wesley, 2000. Geoff Dougherty, Digital Image Processing for Medical Applications, Cambridge University Press Distance learning resources, access: http://uno.biomed.gda.pl	
	Supplementary literature	No requirements	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
