

## Subject card

Subject name and code	Software Engineering, PG_00047848							
Field of study	Biomedical Engineering							
Date of commencement of studies	October 2024		Academic year of realisation of subject			2026/2027		
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	5		ECTS credits			5.0		
Learning profile	general academic profile		Assessment form			exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Aleksander Jarzębowicz					
	Teachers	dr inż. Aleksander Jarzębowicz						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity Participation in classes including plan				Self-study SUM		SUM	
	Number of study hours	60		5.0		60.0		125
Subject objectives	The course is focused on introducing to students the aspects of industrial software development: large systems, compliant to requirements of a specific customer, supporting business goals, providing a required level of quality characteristics, produced and maintained by large developers teams.							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
	[K6_W06] Knows and understands the basic processes occurring in the life cycle of devices, facilities and systems specific to a given field of study.		The student enumerates and describes key areas of software lifecycle. Explains the selection of practices used in particular areas and the organization of the IT project depending on its specifics.			[SW1] Assessment of factual knowledge		
	[K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study		The student uses Unified Modeling Language and designs the models of IT systems. Develops the vision document of the IT system including basic requirements and restrictions.			[SU1] Assessment of task fulfilment		

Data wydruku: 18.07.2024 08:47 Strona 1 z 2

2. Scope and subject of software engineering. Essential motivations and concepts. 3. Planning and defining scope of software project. Rich Picture. 4. Areas of software engineering - an overview. 5. Commodelling. Languages for modelling and specification. 6. Lisse, Seas. 7. Object-oriented analysis using UML. 8. Modelling of system structure: other structural diagrams 9. Modelling of system structure: class diagrams 10. Modelling system dynamics: sequence and communication diagrams 11. Modelling system dynamics: representing object's state 12. System design: high-herel design 13. System design: high-herel design 14. Software design systems 15. Foundations of software quality. Mefins of object-oriented design. 16. Software reuse 17. Classical design patterns 18. Other patterns (internet Applications patterns, analysis patterns, architectural patterns, management patterns) 19. Risk and social responsibility related to IT systems 20. Requirements engineering: requirements determination 21. Requirements engineering: requirements determination 22. Uses intered design patterns 23. Software testing: remise place in software development process 24. Software testing: remise place in software development process 25. Software testing: remise place in software development process 26. Software testing: remise place in software development process 27. Software deployment 28. Software development and software project context 29. Adjusting development process of patterns and applied development process of patterns and management and software project context 29. Adjusting development process of patterns and patter							
verification by tutor is required to pass the lab. Delays in delivering exercises affects the assessments. Only students who pass the lab are entitled to write the exam.    Subject passing criteria	Subject contents	3. Planning and defining scope of software project. Rich Picture. 4. Areas of software engineering - an overview 5. Conceptual modelling, Languages for modelling and specification. 6. Use cases 7. Object-oriented analysis using UML 8. Modelling of logical system structure: class diagrams 9. Modelling of system structure: other structural diagrams 10. Modelling system dynamics: sequence and communication diagrams 11. Modelling system dynamics: representing object's state 12. System design: system architecture 13. System design: system architecture 14. System design: class design (low level) 15. Foundations of software quality. Metrics of object-oriented design. 16. Software reuse 17. Classical design patterns 18. Other patterns (Internet Applications patterns, analysis patterns, architectural patterns, management patterns) 19. Risk and social responsibility related to IT systems 10. Requirements engineering: requirements determination 11. Requirements engineering: requirements specification 12. User interface design: Mielsen's heuristics and examples 13. User interface design: Nielsen's heuristics and examples 14. Software testing: terms, place in software development process 15. Software testing: terms, place in software development process 16. Software reviews and inspections 17. Software deployment 18. Software and inspections 19. Software deployment 20. Classical (waterfall) software lifecycle model 21. Non-classical software lifecycles and development processes 22. Adjusting development process to particular software project context 23. Outline of software project management 24. Software development and management methodologies 25. Properties of plan-driven and agile development 26. CASE tools					
And criteria    Lab (assignments & tests)   50.0%   50.0%     Written exam   50.0%   50.0%     Recommended reading   Basic literature   1.
