GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Machine Learning, PG_00064483		
Field of study	Informatics		
Date of commencement of studies	February 2025	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	Optional subject group Specialty subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Jacek Rumiński	
	Teachers	prof. dr hab. inż. Jacek Rumiński mgr inż. Natalia Szarwińska mgr inż. Szymon Zaporowski	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	45	6.0	24.0	75

Subject objectives	The aim of the course is to acquire knowledge and skills in the field of machine learning algorithms, data pre-processing methods as well as metrics and methods for the verification and validation of algorithms and models.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by: - appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation, - application of appropriate methods and tools	The effect of the learning process is the student acquiring the skills of practical application of machine learning algorithms, formulas in the field of cost functions, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics or regression models, in particular in biomedical applications. , personal safety, health prevention, etc.	[SU1] Assessment of task fulfilment
	[K7_U12] is able, to an increased extent, to analyze the operation of components and systems related to the field of study, as well as to measure their parameters and study their technical characteristics, and to plan and carry out experiments related to the field of study, including computer simulations, interpret the obtained results and draw conclusions	The result of the learning process is that the student acquires the ability to conduct a machine learning experiment along with the interpretation of machine learning results.	[SU1] Assessment of task fulfilment
	[K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study	The effect of the learning process is the student gaining knowledge in the field of understanding the definition of machine learning algorithms, formulas in the field of cost functions, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics or regression models.	[SW1] Assessment of factual knowledge
	[K7_W04] knows and understands, to an increased extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or other elements or programmable devices specific to the field of study, and organization of work of systems using computers or such devices	The effect of the learning process is the student's acquisition of knowledge in the field of implementation or use of programming libraries regarding the practical application of machine learning algorithms, cost functions formulas, model quality assessment metrics, etc., in order to solve problems related to data classification, object detection, generation of generalizing characteristics. or regression models in particular in biomedical applications, human safety, health prevention, etc.	[SW1] Assessment of factual knowledge

Subject contents	Introduction to machine learning (what is machine learning, classifications of machine learning methods) Methods of data acquisition and preparation: data cleansing, data transformation, data standardization and normalization Methods of data acquisition and preparation: data integration and reduction Methods of reducing multidimensionality (e.g. PCA, ICA, etc.) Data representation methods for machine learning The process of acquiring knowledge from data Generalizing characteristics generation methods Rule induction methods and rules evaluation parameters Classification methods (introduction) and classification quality assessment methods (measures, etc.) Supervised classification methods (decision trees, random forests) Supervised classification methods (from Bayes to minimum-distance classification) Supervised Classification (SVM) Methods, Unsupervised classification methods (k-means, ISO-DATA, etc.) Optimization methods - characteristics Optimization methods - gradient methods Linear Regression Logistic regression Artificial neural networks - introduction, perceptron, learning Artificial neural networks - MLP, activation functions, learning part 1. Artificial neural networks - MLP part 2.
Prerequisites and co-requisites	- knows the basics of linear algebra, mathematical analysis and probability calculus with Bayes' theorem - knows the basics of software engineering (software life cycle, software design, testing, etc.). - knows the basics of data analysis methods - knows the basics of Python - can design and model object-oriented - can use databases
Assessment methods and criteria	

Subject passing criteria	Passing threshold	Percentage of the final grade
Exam	50.0%	40.0%
Assignments	50.0%	10.0%
Laboratory	50.0%	50.0%
