|   | Moodle ID: 45167 Image Processing in Robotics LAB https://enauczanie.pg.edu.pl/moodle/course/view.php?id=45167  |   |   |             |                        |   |         |     |  |
| Learning activity and number of study hours | Learning activity   | Participation in<br>classes include<br>plan |   |             |                        | Self-study  |         | SUM |  |
|   | Number of study hours   | 30  |   | 4.0         |                        | 16.0  |         | 50  |  |
| Subject objectives                          | The participants should learn about the process of image acquisition from a video camera, all the problems connected with a proper image acquisition for image processing. Students should know the algorithms of image transformation, filtration, feature detection (image descriptors) and image processing algorithms used in industrial robotic systems. |   |   |             |                        |   |         |     |  |
| Learning outcomes                           | Course out  | Subject outcome                             |   |             | Method of verification |   |         |     |  |
|   | [K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems   |   | The student is able to modify appropriate algorithms in order to implement a vision system with given properties. |             |                        | [SK5] Assessment of ability to solve problems that arise in practice                          |         |     |  |
|   | [K7_W01] knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study   |   | Student knows and understands the mathematical foundations of image processing algorithms used in robotics.       |             |                        | [SW1] Assessment of factual knowledge   |         |     |  |
|   | [K7_W03] knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum   |   | Student understands the principles of operation of image processing systems in robotics.                          |             |                        | [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge |         |     |  |

Data wygenerowania: 21.07.2025 11:02 Strona 1 z 2

| Subject contents   | The content of the subject includes problems of video image perception and acquisition, recording and methods of image processing for robotic applications. Processing concerns stereovision images as well as single image. The procpects of applying processing algorithms are discussed for industrial and mobile robots. |  |                               |  |  |  |
