

Subject card

Subject name and code	, PG_00064563						
Field of study	Civil Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Adam Krasieński				
	Teachers		dr inż. Paweł Więclawski				
			dr hab. inż. Adam Krasieński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	Acquiring knowledge in the field of construction and design of shallow and deep foundations, retaining structures and other selected geotechnical structures. Learning current methods of calculating and designing foundations. Acquiring skills in identifying important geotechnical problems and solving them. Preparation for independent work as civil engineer and education at the second level of studies.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U06] Conduct engineering activities in civil engineering subject area, using and applying practical knowledge and understanding of materials, equipment and tools, processes and technologies.	Carries out engineering activities in the field of foundations and geotechnical works in civil engineering, using his knowledge and understanding of the issues and mechanisms of interaction between structures and the subsoil.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information
	[K6_U03] Design engineering objects and details, processes and engineering systems by applying appropriate standards and methods of design.	Is able to design typical shallow and deep foundations and geotechnical structures for civil, industrial and infrastructure constructions. Knows and uses the appropriate standards, instructions and guidelines as well as appropriate calculation methods for this purpose.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject
	[K6_W06] Demonstrates practical knowledge and understanding of materials, devices and tools, processes and technologies in the field of civil engineering (and their limitations).	Has knowledge in the field of analyzing and using geotechnical documentation for the purposes of designing and constructing foundations of buildings. Knows the basic technical solutions of foundations and technologies for their construction. Is able to select geotechnical solutions and technologies appropriate to the needs and to soil and water conditions.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
Subject contents	[K6_W03] Demonstrate knowledge and understanding of the processes, established standards and design methods in the civil engineering subject area and of their limitations.	Demonstrates knowledge and understanding of the processes and established standards and design methods for foundation, ground improvement and other geotechnical works and is aware of their limitations.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	<p>Lectures:</p> <ol style="list-style-type: none"> 1. Classification of subsoils and geotechnical categories of buildings. 2. Field tests of soils and geotechnical documentation 3. Principles of geotechnical design according to EC7. 4. Application and classification of shallow foundations 5. Calculation, construction and design of shallow foundations 6. Gravity retaining walls - structures, principles of calculation, design and construction 7. Foundation piles - application, classification and types of construction technologies 8. Pile and pile foundations - calculation, design and testing 9. Sheet piles and diaphragm walls - construction schemes, calculation and design 10. Ground anchorages - structures and calculation 11. Drainage of foundation excavations 12. Ground improvement - technologies and use of geosynthetics 13. Strengthening of existing foundations <p>Design</p> <ol style="list-style-type: none"> 1. Examples of calculation tasks for the design of shallow foundations 2. Project 1a - retaining wall shallowly founded 3. Examples of calculation tasks for the design of pile foundations 4. Project 1b - retaining wall supported on piles 5. Examples of calculation tasks for designing sheet pile walls and ground anchorages 6. Project 2 - anchored or strutted sheet pile wall 		
Prerequisites and co-requisites	<p>Completion of first-degree courses:</p> <ul style="list-style-type: none"> - soil mechanics - basics of general construction - building materials - general mechanics and strength of materials - technical drawing - basics of concrete and metal structures 		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Activity during lectures	0.0%	10.0%
	Projects completion	60.0%	40.0%
	Task exam	55.0%	15.0%
	Lecture exam	55.0%	35.0%

Example issues/ example questions/ tasks being completed	Exam: 1. List and describe the types of soils and geotechnical categories of buildings. 2. What is soil subgrade testing documentation and what basic elements should it consist of? 3. What is dynamic probing and what is static probing? 4. Sketch the pressure distributions on the ground under the foundation strip for different values of eccentricity e . 5. Sketch possible calculation schemes for foundation grids. 6. What are the differences in the technologies of construction and applications of Vibro, SDP and CFA piles? 7. Explain the mechanism and causes of negative friction in piles. 8. Sketch and describe two example structures of pile load test stands. 9. Draw approximate bending moment diagrams in a sheet pile wall: a) cantilever, b) single anchored at the bottom, freely supported, c) single anchored at the bottom, fixed in the ground. 10. Sketch the stages of construction of a diaphragm wall. 11. What is the difference between soil replacement and vibroreplacement? (sketches) 12. List the methods of strengthening the subsoil composed of cohesive and organic soils and briefly describe two of them. 13. Principle of operation of deep wells and wellpoints. When do we use one and when the other? 14. Sketch examples of strengthening old brick foundations. 15. Calculate the eccentricity of loads and the distribution of pressures on the ground under an example of a foundation footing. 16. Calculate the load-bearing capacity of the subsoil under an example of a shallow foundation. 17. Estimate the settlement of an example of a shallow foundation. 18. Calculate the forces in piles in an example pile foundation. 19. Calculate the load-bearing capacity of an example pile. 20. Calculate the earth pressure and bending moment in an example sheet pile wall. 21. Estimate the load-bearing capacity of an example plate anchorage. Project: 1. Describe the problem of earth pressure on a retaining wall. 2. Load-bearing capacity of the subsoil in conditions with and without drainage. 3. Provide the procedure for calculating and designing a retaining wall. 4. Provide the procedure for calculating and designing a sheet pile wall.
