

Subject card

Subject name and code	Hydrogen ecosystems, PG_00064574						
Field of study	Hydrogen Technologies and Electromobility						
Date of commencement of studies	October 2022		Academic year of realisation of subject			2024/2025	
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	3		Language of instruction			Polish	
Semester of study	5		ECTS credits			3.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Adam Kielak				
	Teachers		dr inż. Adam Kielak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	Acquisition of knowledge concerning: Production and application of hydrogen in industry as well as in local cooperatives, communities, and energy clusters. Creation of value chains involving hydrogen to increase energy efficiency. The significance of hydrogen in modern energy systems based on renewable energy sources.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U05] can use analytical and simulation methods, prepare and for the formulation and solution of tasks in the field of hydrogen technologies, automation and robotics, electrical engineering, use various techniques to carry out engineering tasks related to electrical devices, hydrogen installations, control and robotics systems	It determines the potential of local communities in terms of building an energy ecosystem. It designs value chains involving hydrogen technologies and AI-based control that achieve the highest efficiency.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K6_W13] knows the properties of materials used in the field of hydrogen energy and electromobility	It selects materials depending on the electrochemical and thermodynamic conditions prevailing in hydrogen energy systems.	[SW1] Assessment of factual knowledge
	[K6_U08] can design and build systems and devices related to automation systems, mechatronics and robotics in energy storage devices and in hydrogen installations	Defines the assumptions for the design of control systems. Selects equipment for automation and control systems.	[SU3] Assessment of ability to use knowledge gained from the subject
	[K6_K01] is aware of the need for continuous education and self-improvement in the field of the profession of an electrician and knows the possibilities of further education	It is looking for the latest information about hydrogen technologies. He/she selects the information found to the issues under consideration.	[SK5] Assessment of ability to solve problems that arise in practice
	[K6_W08] has basic knowledge in the field of energy storage systems: mechanical, thermal, electrical and others, knows the basics of thermodynamics and fluid mechanics, as well as the construction and operation of thermal energy equipment, hydrogen installations, process equipment, including renewable energy sources	It selects equipment for the processes carried out, optimally using energy from RES. It defines the rules for the operation of equipment in accordance with the best technical knowledge and safety rules.	[SW1] Assessment of factual knowledge
Subject contents	Definition and key components of hydrogen ecosystems and hydrogen valleys. The role of hydrogen in energy transition and sustainable development. Hydrogen production methods: water electrolysis, methane reforming, biological methods. Analysis of renewable and non-renewable sources in hydrogen production. Hydrogen storage technologies: compressed hydrogen, liquid hydrogen, hydrates. Infrastructure for hydrogen transport: pipelines, tankers, container technologies. Hydrogen fuel cells: operating principle, types, applications in transport and energy. Hydrogen as an energy buffer in renewable energy systems. Safety guidelines for the production, storage, and distribution of hydrogen. Overview of international regulations concerning hydrogen. Principles for creating local hydrogen ecosystems from production to hydrogen utilization. Innovations and new technologies in the hydrogen sector. Scenarios for the future hydrogen economy.		
Prerequisites and co-requisites	Basic knowledge of chemistry and organization of energy systems.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	60.0%	100.0%

Example issues/ example questions/ tasks being completed	<p>Hydrogen as an energy storage. Hydrogen transport technologies depending on the distance between the place of production and the place of use. Civic energy communities, clusters and energy cooperatives. Hydrogen generation equipment. Equipment used in hydrogen storage and transport technologies. Industrial use of hydrogen. Creating efficient value chains in energy ecosystems. IT systems in energy cooperatives and clusters. Green hydrogen as an ecological raw material. Innovation and new technologies in the hydrogen sector.</p>
