

Subject card

Subject name and code	Coastal Environment, PG_00053472						
Field of study	Spatial Development						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		1.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Miłosz Marciniak				
	Teachers		dr hab. inż. arch. Karolina Krośnicka				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	The aim of the course is to familiarize students with the environmental conditions and determinants of urbanization and tourism development in the coastal zone, as well as the location and operation of maritime and coastal infrastructure.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W02] has the knowledge necessary to understand the social, economic, legal and other non-technical conditions of design and planning.Including the principles of creating and developing forms of individual enterprise		has in-depth knowledge of spatial management, is able to explain the environmental conditions and determination of the location and operation of maritime and coastal infrastructure.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K7_W01] has in-depth and expanded knowledge of spatial development, urban planning and spatial planning, including activities used in the process of revitalization of degraded areas and ecological design		understands and describes the factors and mechanisms of development of sea areas, is able to communicate in the environment of various coastal zone users; understands and knows how to analyze phenomena and processes occurring in the marine environment and human impact on this environment		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K7_U07] is able to direct the process of self-education in the field of urban planning, spatial planning and related fields; obtains information from literature and other appropriately selected sources, interprets and critically evaluates them; formulates and extensively justifies his/her opinion and on this basis is able to prepare a short scientific paper; is able to inspire and organize the learning process of others		can use the known methods to develop non-standard analyzes in the field of spatial management, can describe and explain functional and spatial conflicts in the exploitation and use of the coastal zone; can develop scenarios for the operation of boundary structures		[SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		

Subject contents	<p>Selected issue of coastal zone geology and hydrogeology. Specificity of groundwater occurrence in the coastal zone. Classification and mechanics of soils and bottom sediments. Influence of the type of bottom sediments on: possibilities of maintaining the depth of waterways in open water bodies and in the coastal zone, dredging works technologies, route selection and foundation of the offshore pipeline. Assessment of land suitability for foundation of objects in the coastal zone.</p> <p>Shore balance, debris transport in the coastal zone, debris streams, silting sand, shoreline and bottom dynamics. Forms of the sculpture of the edge and bottom of the shallow water. Types of sea shores and coasts - navigation characteristics and from the point of view of the construction and development of the port. Impact of climate change on the coastal zone.</p> <p>Identification of shoreline and coastal zone hazards (including floods and flooding, surface displacement). Protection of the sea shore and coastal environment: levees and anti-storm banks, shore reinforcements (spurs, bands, breakwaters and underwater thresholds, biotechnical cover), refutations. Examples of sea shore protection projects in Poland.</p>		
Prerequisites and co-requisites	Ability to cause-effect-thinking, analysis and synthesis; knowledge of natural, social and economic determinants of spatial management gathered at previous stages of study; geographical knowledge obtained at earlier stages of education		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	60.0%	100.0%
