

Subject card

Subject name and code	Residential ventilation and air conditioning systems, PG_00064752						
Field of study	Power Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Sylwia Fudala-Książek				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		7.0		33.0	100
Subject objectives	The aim of the course is to familiarise the student with basic knowledge of ventilation and air-conditioning and the shaping of the indoor environment, current legal regulations and standards relating to the subject, installation materials and criteria for their selection, design methodologies, methods and technologies for the execution of the installations in question, as well as related non-technical considerations.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U04] creatively designs or modifies, either entirely or at least in part, energy systems, machines and devices, transmission grids and internal installations, considering both technical and non-technical aspects, estimating costs and utilizing design techniques appropriate for tasks within the scope of Power Engineering		The student designs or modifies, in whole or at least in part, energy systems, machines and equipment, transmission networks or internal installations according to a given specification, taking into account technical and non-technical aspects. The student is able to carry out an economic analysis of the designed solutions, estimating costs and using design techniques appropriate to the tasks in power engineering.		[SU1] Assessment of task fulfilment [SU5] Assessment of ability to present the results of task		
	[K7_W03] demonstrates structured and theory supported knowledge encompassing key issues in the field of Power Engineering, enabling design of energy systems, machines and devices, transmission grids and internal installations		The student possesses knowledge covering issues in the field of Power Engineering which enables him/her to design power engineering systems, machines and equipment, transmission networks and internal installations. He/she is able to use tools supporting power engineering design.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	LECTURES: Ventilation airflow and its properties. Organisation of room air exchange, air distribution in ventilated rooms. Characteristics of ventilation and air conditioning systems. Air treatment. Air recirculation and heat recovery. Mechanical ventilation and air conditioning system components ducts, fittings and equipment. Ventilation and air conditioning units. Dimensioning of mechanical ventilation duct networks. Basics of acoustics. Legal regulations, standards, technical, construction and fire requirements. EXERCISES: Calculations related to the change of parameters of the humid air condition and practical use of the hx (Mollier) diagram. Calculation of external and internal heat and moisture gains. Methods for the determination of ventilation air volume flows. DESIGN: Design of a mechanical supply and extract ventilation system for a set of rooms in a building. Ventilation air balance. Application of the principles of ventilation air distribution and selection of supply and extract air diffusers. Duct dimensioning. Selection of fittings and equipment. Calculation of pressure drops. Guidelines for preparing project documentation.		
Prerequisites and co-requisites	Knowledge of the basics of ventilation and air conditioning. Ability to draw in AutoCAD. Knowledge of subjects including: physics, thermodynamics, microbiology, chemistry, heating, ventilation and air conditioning.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	final colloquium	60.0%	40.0%
	calculation exercises	60.0%	20.0%
	project task	60.0%	40.0%
