|   | E-learning hours inclu   | uded: 0.0  |  |                                     |        |  | '       |          |  |
| Learning activity and number of study hours   | Learning activity  | Participation in classes included plan   |  | Participation in consultation hours |        | Self-study   |         | SUM      |  |
|   | Number of study hours  | 45   |  | 5.0                                 |        | 25.0   |         | 75       |  |
| Subject objectives  | The aim of the course is to familiarise students with the impact of energy systems on the climate and its anthropogenic changes.   |  |  |                                     |        |  |         |          |  |
| Learning outcomes   | Course outcome   |  | Subject outcome  |                                     |        | Method of verification   |         |          |  |
|   | [K7_W01] explains and describes, based on general knowledge in the field of scientific disciplines forming the theoretical foundations of Power Engineering, the structure, principles of operation and evironmental impact of energy systems, machines and devices, transmission grids and internal installations |  | Has knowledge of exergetic analysis with environmental cost analysis. Knows the effects of fossil fuel combustion on environmental contaminants  |                                     |        | [SW1] Assessment of factual knowledge  |         |          |  |
|   | [K7_U02] formulates and tests hypotheses concerning problems related to energy conversion processes, their efficiency, control, safety and impact on the environment, as well as simple research problems  |  | Is familiar with the energy<br>strategies of Poland, the<br>European Union and global<br>agreements in the area of<br>anticipated energy mixes and the<br>prevention of climate change |                                     |        | [SU2] Assessment of ability to analyse information   |         |          |  |
| Subject contents  |  |  |  |                                     |        |  |         | roducing |  |
|   | Characteristics of the formation of the atmosphere and its changes over time. Models for determining the equilibrium temperature.     Causes and mechanisms of climate change.   |  |  |                                     |        |  |         |          |  |
|   | Exergy and the determination of the environmental cost.  |  |  |                                     |        |  |         |          |  |
|   | 5 Determination of the carbon footprint of different energy technologies   |  |  |                                     |        |  |         |          |  |
|   | 6. Prospective low carbon technologies and opportunities for decarbonisation of the Polish economy.  |  |  |                                     |        |  |         |          |  |
| Prerequisites And co-requisites Knowledge of thermodynamics I and II especially in the area of therodynamic cycles. |  |  |  |                                     |        |  |         |          |  |
