

Subject card

Subject name and code	Energy microgrids, PG_00064776						
Field of study	Power Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Dobrzyński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		7.0		23.0	75
Subject objectives	Achieve knowledge and skills in modeling, control and operation of microgrids.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K11] is aware of importance of professional acting, the need for critical verification of acquired knowledge and consulting experts opinion in case of facing difficulties with individual problem solving		possesses the ability to retrieve information necessary for modeling and analyzing the operation of microgrids. Information is evaluated, pre-verified and corrected as necessary		[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_U01] utilizes acquired analytical, simulation, and experimental methods, as well as mathematical models for analysis and evaluation of energy systems, machines and devices, transmission grids and internal installations		can analyze the conditions for the cooperation of microgrids with electric power systems		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_W02] demonstrates structured and theory supported knowledge encompassing key issues in the field of Power Engineering, enabling modeling and analysis of energy systems, machines and devices, transmission grids and internal installations		can model microgrids to ensure energy sufficiency for these grids		[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	Microgrids operating as part of low-voltage networks. Conditions for parallel and islanded operation. Photovoltaic systems. Energy storage. Electric vehicle charging systems. Integration of microgrids with the electric power system. Modeling of microgrids.						
Prerequisites and co-requisites	Basics of electrical engineering.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Laboratory grade		60.0%		50.0%		
	Written exam		60.0%		50.0%
