

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Modelling of robots and manipulators, PG_00064800									
Field of study	Mechatronics									
Date of commencement of studies	February 2025		Academic year of realisation of subject			2025/2026				
Education level	second-cycle studies		Subject group			Specialty subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery			at the university				
Year of study	1		Language of instruction			Polish				
Semester of study	2		ECTS credits			2.0				
Learning profile	general academic profile		Assessment form			assessment				
Conducting unit	Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology							hnology		
Name and surname	Subject supervisor		dr inż. Michał Mazur							
of lecturer (lecturers)	Teachers									
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM		
of instruction	Number of study hours	15.0	0.0	15.0	0.0		0.0	30		
	E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM		
	Number of study 30 hours		4.0		16.0		50			
Subject objectives	Expanding knowledge about modeling of robots and manipulators. The perception of robots as amechatronic system. Some specific issues relating to the actors, sensors and control systems.									
Learning outcomes	Course out	utcome Subject outcome Method of verificat				ication				
	[K7_W04] demonstrates knowledge encompassing selected issues in the field of detailed knowledge, particularly in the scope of methods, techniques, tools, and algorithms specific to Mechatronics		Students have theoretically knowledge related to the issues of mechatronic design and mechatronic systems in the field of robots.			[SW3] Assessment of knowledge contained in written work and projects				
	[K7_U13] evaluates the feasibility and potential for utilizing new technical and technological achievements in accomplishing tasks characteristic for the field of study		Students know the available virtual prototyping tools used to design robots.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment				
	[K7_W02] demonstrates structured and theory supported knowledge encompassing key issues in the field of Mechatronics, enabling modeling and analysis of stationary and non-stationary mechatronic systems, devices, and processes with continuous and discrete operation		Students understand the necessity of using discrete modeling techniques for robot design and operation.			[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge				
	[K7_U02] formulates and tests hypotheses concerning problems od stationary and non-stationary mechatronic systems/processes, as well as simple research problems		Students have knowledge about development trends and the most important new achievements in the field of robots.			[SU5] Assessment of ability to present the results of task [SU3] Assessment of ability to use knowledge gained from the subject				

Subject contents							
	LECTURE: 1 Introduction 2 Modern trends in the development of two industrial robots 3 Sensors 4 SignalConditioning 5 Tactile and haptic sensors 6 Methods of localization of mobile robots 7 Effectors 8 Elementsof power supply systems 9 Drive chain elements used in robots 10 Tools for robot programming andsimulation Laboratory: 1 Programming the tasks of a delta robot on the example of ABB IRB360, working with a beltfeeder 2 Programming the tasks of the HC3a collaborative robot using the OnRobot vision system 3Programming the movement of an industrial robot with coupling from a force sensor on the example of theNachi NC04 robot 4. kinematics and dynamics of manipulator movements using the RobotAnalyzer program5. Development of the manipulator's movement path for the implementation of a specific movement task in asimulation using the Nachi MZ04 manipulator available in the RoboDK 6 libraries. Operating the Nachi NC04robot and programming its movement trajectories using the robot controller 7. Preparing the manipulator'smovement path for the purpose of implementing a specific movement task of the ABB IRB360 robot using the RobotStudio program and a robot controller. 8. Operating the HCR-3a robot and preparing themanipulator's movement path for the purpose of implementing a specific robot movement task using directlearning						
Prerequisites and co-requisites	Knowledge and experience in Industrial Robots and Manipulators (I-st level). Knowledge and experience inInformatics (I-st level). Knowledge and experience in Mechatronic design (I-st level).						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Team projects	50.0%	40.0%				
	Colloquium	50.0%	60.0%
