

Subject card

Subject name and code	Modeling and automation of technological processes, PG_00064938						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2025	Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies	Subject group			Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Bogdan Ścibiorski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	18.0	0.0	0.0	9.0	0.0	27
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	27		5.0		43.0	75
Subject objectives	Familiarization with the principles of creating realistic models of manufacturing processes for simulation purposes in automated production environments.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K13] is ready for responsible performance of professional roles, considering ever-changing need of the society, including self development and supporting and fulfilling work ethics	The student is prepared to responsibly perform professional roles in the field of analysis, modeling, and optimization of production systems, considering the dynamic development of technology and its impact on society and the economy.	[SK1] Assessment of group work skills
	[K7_W13] explains the main principles of individual and teamwork organization, including various forms of entrepreneurship utilizing knowledge from the field of engineering and technical sciences and disciplines relevant to the course of study	The student understands the fundamental principles of individual and team work organization in the context of designing and implementing automated production systems, taking into account aspects of production engineering and process optimization.	[SW3] Assessment of knowledge contained in written work and projects
	[K7_W02] demonstrates a structured and theoretically grounded knowledge of the key topics in Mechanical Engineering enabling the analysis and modelling of mechanical systems, processes and devices	The student demonstrates structured and theoretically grounded knowledge in the field of modeling and automation of technological processes, enabling the analysis and simulation of production systems and their optimization.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	[K7_U02] formulates and solves technical problems specific to Mechanics and Mechanical Engineering using appropriate tools including CAD and MES systems, and prepares technical documentation	The student formulates and solves technical problems specific to mechanics and machine construction, using appropriate tools for modeling and analyzing production processes. The student is able to develop simulation reports and assess the efficiency of production systems.	[SU1] Assessment of task fulfilment
Subject contents	<p>Lecture: Simulation model. Characteristics of the manufacturing system. Forms of automated production. Manufacturing flexibility. Machining automation. Production system modeling techniques. The concept of the system. Problems of stochastic processes. Modeling methods. Description of simulation objects. Techniques for measuring simulation results. Selected models of production systems in the conditions of automated production.</p> <p>Project: design of a manufacturing structure model, determination of values for the parameters describing the efficiency of the manufacturing system. Model optimization. Decomposition and simulation</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Assessment test	56.0%	50.0%
	Project	56.0%	50.0%
