

## Subject card

Subject name and code	MSc Thesis, PG_00065556						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Optional subject group		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		20.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Wyposażenia Okrętu -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Wojciech Litwin				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	0.0	0.0	0
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	0		30.0		470.0	500
Subject objectives	The aim of the subject is to present students with the principles of preparing a diploma thesis from the substantive and editorial perspective, regulations and principles important in the implementation of IT projects that are the subject of the diploma thesis. The possibilities of further education and undertaking second-cycle studies will be discussed. An important aim of the subject is to develop in students the skills of creating technical documents and the skills of public presentation of content related to the performance of the profession of Master of Science in Engineering using appropriate technical means and modern audiovisual aids. The aim is also to acquire the ability to clearly and precisely formulate and express the content conveyed, in accordance with the 5C principle (Clear, Complete, Correct, Courteous, Concise).						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U14] integrates information obtained from literature and other properly selected sources, including those in a foreign language, creatively interpreting and critically evaluating them, and drawing conclusions	When preparing a seminar presentation, the student is able to communicate in Polish and English using specialist terminology, using various techniques, including IT tools; is able to present the results of the work performed	[SU2] Assessment of ability to analyse information
	[K7_K13] is ready for responsible performance of professional roles, considering ever-changing need of the society, including self development and supporting and fulfilling work ethics	The student understands that in technology, knowledge and skills become outdated very quickly; is aware of the importance of knowledge in solving engineering problems, such as those realized as part of the diploma thesis; is aware of the social role of a technical university graduate	[SK2] Assessment of progress of work
	[K7_W03] demonstrates structured and theory supported knowledge encompassing key issues in the field of Naval Architecture and Ocean Engineering, enabling development and synthesis of shipborne and offshore systems, devices, and processes	The student has general and specific knowledge in the field of shipbuilding related to the issues covered by the diploma thesis. The student has knowledge of development trends and the most important new achievements in shipbuilding related to the implementation of the diploma thesis.	[SW2] Assessment of knowledge contained in presentation
	[K7_U15] evaluates the feasibility of advanced methods and tools for solving complex engineering tasks of a practical nature, characteristic of the field of study, and selects and applies appropriate methods and tools for this purpose	The student is able to find useful sources of information, methods and techniques and use them properly. The student is able to use computer techniques, including computer-aided design.	[SU5] Assessment of ability to present the results of task
Subject contents	Selection of thesis thema based on available literature data. Selection of proper experimental methods for solution of the chosen problem. Caring out experiments supporting the thesis, theoretical calculations or design of a technological project. Presentation of selected literature data and own scientific research results		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Semester/diploma dissertation	60.0%	100.0%
Recommended reading	Basic literature	Dependent on the subject of the diploma work	
	Supplementary literature	Dependent on the subject of the diploma work	
	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	no		
Work placement	Not applicable
