

Subject card

Subject name and code	Yacht architecture & design, PG_00065613						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	1		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Projektowania Okrętu -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. sztuki Paweł Gelesz				
	Teachers		dr hab. sztuki Paweł Gelesz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Additional information: A lecture involving students in design activities requiring creativity stimulated by the content discussed. The completion of a major cognitive or practical task by a group of students or individually. The course leader inspires the group to create together and controls the course. Project work is multi-stage and characterized by a longer implementation time (semester). It includes the independent acquisition, collection of information, its processing, elaboration and presentation of the results to others.						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		8.0		37.0	75
Subject objectives	<p>The programme's thematic area (with research elements) includes all design activities falling within the scope of broadly understood yacht architecture (sailing and motor yachts), aggregating interdisciplinary knowledge from the technical area with elements of ergonomics basics.</p> <p>A fundamental form of student activity is exploration. The programme envisages the use of: experiments (e.g. on a scale of 1:1), the method of successive approximations (the so-called design spiral), research work (research through design), synthesising results (e.g. as part of team work) and a final author's design proposal that also takes into account legal requirements and limitations. An important feature of the programme is the systematic development of students' competences at the creative and decision-making level.</p> <p>Course objectives:</p> <ul style="list-style-type: none">- development of competence for the creation of new concepts in the area of yacht architecture oriented primarily on the needs of users,- development of a responsible attitude as creator and coordinator of innovations in the field of yacht architecture- development of skills and creative attitudes in the field of yacht architecture in its broadest sense						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W12] identifies and interprets the main developmental trends and significant new achievements in the field of engineering and technical sciences and disciplines relevant to the course of study	The student is able to create, present and argue a solution to usability problems in the area of yacht spaces.	[SW2] Assessment of knowledge contained in presentation
	[K7_W03] demonstrates structured and theory supported knowledge encompassing key issues in the field of Naval Architecture and Ocean Engineering, enabling development and synthesis of shipborne and offshore systems, devices, and processes	The student has a structured knowledge of the fundamentals of industrial design in the ergonomics of living spaces.	[SW2] Assessment of knowledge contained in presentation
	[K7_K82] is equipped to participate actively in lectures, seminars and laboratory classes conducted in foreign language	Students are ready to participate in discussions, to exchange opinions, to argue and to present the results of their work in a foreign language.	[SK4] Assessment of communication skills, including language correctness
	[K7_U03] identifies and formulates task specifications in the scope of shipborne and offshore systems/ processes design, including non-standard problems also accounting for their non-technical aspects	The student is able to solve a design problem concerning the organisation of living space for a specific user group.	[SU1] Assessment of task fulfilment
Subject contents	ergonomics of space, programme and utility processes, optimisation of living spaces.		
Prerequisites and co-requisites	<p>Entry requirements:</p> <ul style="list-style-type: none">- knowledge of design methods (including teamwork),- ability to work manually using a wide range of methods and tools (including working in CAD and mock-ups),- competences connected with analytical skills and communicating the results of one's work using various information techniques.- the ability to critically appraise their knowledge and skills and recognise the importance of knowledge in solving advanced cognitive and practical problems, including seeking expert advice- ability to independently integrate acquired and continuously developing competences and experience in order to consciously develop a creative attitude- fluency in spoken and written english <p>Additional requirements</p> <ul style="list-style-type: none">- skills to formulate and solve complex issues,- reflection on the ethical, social and scientific aspects of the design profession		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	presentation of work results	30.0%	25.0%
	semester project	50.0%	70.0%
	attendance control	50.0%	5.0%

	eResources addresses	Adresy na platformie eNauczanie:	
	Example issues/ example questions/ tasks being completed	Design a space concept for a habitable cabin with an atypical functional layout. Design a concept for the utilisation of a given space for the realisation of a specific functional programme. Design a concept for the multi-functional use of the yacht space for the realisation of utility processes related to the accommodation of a specific number of users on board.	
Work placement	Not applicable
