

Subject card

Subject name and code	Risk and reliability of systems, PG_00065614						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Zakład Siłowni Okrętowych -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Roman Liberacki				
	Teachers		dr inż. Roman Liberacki				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		30.0	100
Subject objectives	Introducing students to methods of reliability assessment and risk analysis of technical systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W11] interprets social, economic, legal (including industrial and intellectual property laws), and other non-technical aspects of engineering activities, and includes them into engineering practice		The student interprets the economic and legal conditions for safety assessment and incorporates them into engineering practice.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K7_K12] is ready for fulfilling social commitment and initiation of actions for public interest including entrepreneurial thinking and acting		The student understands the social role and the necessity of striving to minimize risks while maintaining a reasonable approach to the associated costs and benefits.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K7_U03] identifies and formulates task specifications in the scope of shipborne and offshore systems/ processes design, including non-standard problems also accounting for their non-technical aspects		The student identifies and formulates tasks and solves them in the context of system design, taking into account their safety. He/ she also considers atypical aspects such as the human factor.		[SU1] Assessment of task fulfilment		
	[K7_K11] is aware of importance of professional acting, the need for critical verification of acquired knowledge and consulting experts opinion in case of facing difficulties with individual problem solving		The student understands and can perform a professional risk analysis related to technical systems. He/she can critically verify the acquired knowledge and utilize expert opinions in case of difficulties in independently solving a problem.		[SK5] Assessment of ability to solve problems that arise in practice		

Subject contents	LECTURES: Concept of reliability, reliability indicators, mathematical models for assessing the reliability of elements and systems. Statistical hypothesis testing. Maintainability and availability of technical systems. Human factors. Methods for assessing the probability of human errors. Concept of risk, risk measures, mathematical models for risk assessment. ALARP criterion. Formal Safety Assessment (FSA) method in shipping. Safety management. PROJECT: Risk analysis of a selected technical object.		
Prerequisites and co-requisites	Basic knowledge of the construction and operation of machines and devices.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	100.0%	50.0%
	Written test	50.0%	50.0%
