

Subject card

Subject name and code	Biological Techniques in Biomaterial Research, PG_00065674						
Field of study	Mechanical and Medical Engineering						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Technologii Biomateriałów -> Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Wekwejt				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		10.0		85.0	125
Subject objectives	The objective of the course is to develop skills in applying advanced biological techniques in biomaterials research. Students will become familiar with selected methods for assessing biocompatibility and biological properties of materials, as well as standard diagnostic procedures used in mechanical-medical engineering. The main emphasis will be placed on laboratory techniques and their applications in biomedical research, enabling precise evaluation of materials in a medical context.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W04] He/she has in-depth knowledge related to the construction and utilization of machines used mechanical-medical engineering		The student is able to apply information and communication technologies to analyze the results of biomaterials research.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K7_U13] He/she uses in-depth knowledge related to the diagnoses techniques and medical procedures in the scope of the field of study of mechanical-medical engineering		The student applies advanced diagnostic techniques and is able to interpret the biological research results of biomaterials.		[SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K7_K82] is equipped to participate actively in lectures, seminars and laboratory classes conducted in foreign language		The student actively participates in class and is able to utilize materials in English.		[SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work [SK2] Assessment of progress of work		
	[K7_U82] is able to proficiently obtain and process information related to field of study and academic environment in foreign language at B2+ level of the Common European Framework of Reference for Languages (CEFR)		The student is able to effectively utilize scientific literature and English-language resources in the context of biomaterials research.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information		

Subject contents	The course focuses on the practical understanding of advanced biological techniques and their applications in biomaterials research within the context of mechanical-medical engineering. Students will gain knowledge and practical skills in the following areas: (1) Introduction to advanced biological techniques in biomaterials research, (2) Assessment of biocompatibility and toxicity of materials, (3) Cell culture methods, (4) Analysis of biological properties in mechanical-medical engineering, (5) Optical and electron microscopy in biomaterials research, (6) Immunohistochemistry and cell staining techniques, (7) Methods for assessing biomechanical properties and biodegradation of biomaterials, (8) Diagnostic techniques and imaging in medical materials research.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Portfolio Containing Reports from Conducted Experiments	75.0%	100.0%
