

## Subject card

Subject name and code	Basics of Engineering Programming, PG_00060328						
Field of study	Civil Engineering						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		1.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Katedra Wytrzymałości Materiałów -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Łukasz Pachocki				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	0.0	0.0	0
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	0		0.0		0.0	0
Subject objectives	<ul style="list-style-type: none"><li>learning the basics of engineering programming in MATLAB and Python</li><li>learning to use MATLAB and Python to solve basic data analysis problems</li><li>presentation of the basic capabilities of Ms Excel sheets for data analysis</li></ul>						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.		The student is able to solve engineering problems related to the basic principles of physics and the processing of experimental data.		[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
	[K6_W05] Demonstrate knowledge and understanding of research methods (obtaining information, simulations, experimental methods) in the field of civil engineering.		The student is able to define and initialize variables and is able to distinguish between their types. The student is able to use mathematical operators and perform matrix operations in MATLAB and Python. The student knows the basics of logic in programming and is able to write conditional "if" statements. The student can use the "while" and "for" loops. The student is able to use the built-in functions of the environment and is able to write his own functions. The student is able to use external files and calculate basic statistical quantities. The student knows the basics of drawing graphs and two basic numerical methods: trapezoid integration and linear approximation.		[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>1. Installation and configuration of the environment. Basic information on its operation.2. Presentation of the basic types of variables and mathematical operators. Vectors and matrix operations.3. Logic in MATLAB and Python. Presentation of logical operators and conditional if statement. Using while and for loops.4. Functions in MATLAB and Python.5. Basics of data analysis - presentation of basic statistical values. Loading data from external files and drawing charts. Two basic numerical methods: trapezoid integration and linear approximation.</p>		
Prerequisites and co-requisites	Mathematics, Physics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		50.0%	50.0%
		50.0%	50.0%
