GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	, PG_00059973					
Field of study	Environmental Engineering					
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026	
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study	
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	1		Language of instruction		Polish	
Semester of study	2		ECTS credits		2.0	
Learning profile	general academic profile		Assessment form		assessment	
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics					
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Piotr Jasiński				
	Teachers					

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	5.0	19.0	54

Subject objectives	The course will discuss issues related to the processes of control of indoor microclimate. The topics of the course will include the basic issues of climate and microclimate of closed rooms, measurements of physical quantities (including humidity and air temperature, gas concentration) affecting the climate and human well-being, indicators of human comfort and discomfort. A description and issues related to microclimate control systems will be presented, both in the form of theoretical considerations, but also practical solutions actually used will be presented.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K7_W04	has the ability to assess the stability of automatic control systems regulation	[SW1] Assessment of factual knowledge
	[K7_W11] has knowledge to analyze, evaluate and optimize processes, objects and systems of environmental engineering and knows the principles of rational energy management and resources	has the ability to assess damage to peripheral elements of automation	[SW1] Assessment of factual knowledge
	K7_U06	has the basic skills to implement and test the known automatic control systems, to correct the characteristics, to evaluate the stability of the systems	[SU3] Assessment of ability to use knowledge gained from the subject

Subject contents	Basic concepts of automation, basic principles of automatic control, classification of automation systems.Elements of automatic control systems: measuring devices, controllers, actuators. Basic members of linear automatic control systems. Analysis of linear control systems in the time domain. Open-loop and closed-loop systems. Impulse response. Step response. Frequency analysis of linear control systems. Stability of linear automatic control systems: concept and stability criteria. Automation actuators. Sensors in automation. Control systems in heating, ventilation and air conditioning.

Prerequisites and co-requisites	

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	50.0%	70.0%
	Tests	50.0%	30.0%
