

Subject card

Subject name and code	, PG_00059983						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Environmental Engineering Technology -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Krzysztof Czerwionka				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		52.0	102
Subject objectives	The aim of the course is to provide detailed and advanced knowledge in the field of wastewater characteristics, legal regulations and standards, design methods and tools supporting design, methods and technologies for the implementation of the treatment systems in question, as well as the non-technical conditions related to them. The classes will lead to the acquisition of skills in obtaining and integrating information from various sources and databases, applying calculation methodologies and design principles, and using software.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U12		The student has extended and in-depth knowledge in the field of designing wastewater treatment systems from the technological, economic and legal perspective		[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	K7_W07		The student has extended and in-depth knowledge of unit processes and their application in the technological system of sewage treatment plants.		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	K7_W06		The student has extended and deepened hydraulic knowledge necessary in designing wastewater treatment plants.		[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	K7_U10		The student is able to design a municipal wastewater treatment plant in the field of wastewater treatment technologies for various outputs		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		

Subject contents	Lectures: Wastewater treatment plant as a source of raw materials. Balance of organic matter, nitrogen and phosphorus compounds. The influence of sludge management on the pollution load in activated sludge chambers. Optimizing the demand for organic compounds. Phosphorus removal and recovery. Nitrogen removal and recovery. Use of treated wastewater as a water source. Rules for dimensioning sewage treatment plants based on the modified ATV A131 guidelines. Control systems for nitrogen and phosphorus transformation processes. Flow measurements in sewage treatment plants. Sewage treatment plants of the future.		
Prerequisites and co-requisites	Water and wastewater technology II. Water and wastewater treatment equipment.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Completion of the project	60.0%	40.0%
	Exam	60.0%	60.0%
