

## Subject card

Subject name and code	, PG_00059953						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Sylwia Fudala-Książek				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		20.0	55
Subject objectives	The aim of the course is to acquire knowledge and skills in the types of renewable energy sources and technologies using renewable energy in practice.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U04		Students will be able to prepare and deliver a presentation and lead a discussion on the presentation given, on the subject of renewable energy sources, including waste sources.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K7_U01] can obtain information from literature, databases and other sources; can integrate the obtained information, interpret and critically evaluate them, draw conclusions, and formulate and comprehesively justify the opinions		Students will be able to acquire, analyse and make appropriate use of information from Polish and foreign literature in the field of unconventional energy sources.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
	[K7_W11] has knowledge to analyze, evaluate and optimize processes, objects and systems of environmental engineering and knows the principles of rational energy management and resources		The student is able to analyse, evaluate and optimise processes in terms of energy efficiency in environmental engineering on the basis of the acquired knowledge and is familiar with the principles of rational energy and resource management.		[SW2] Assessment of knowledge contained in presentation		
	K7_U12		The student analyses and evaluates technical solutions using renewable sources in terms of their economic viability and functionality.		[SU1] Assessment of task fulfilment [SU5] Assessment of ability to present the results of task		
	K7_W04		The student is able to present solutions to complex engineering tasks in the field of design, modelling, optimisation, control of processes, objects and systems in environmental engineering, in the field of practical solutions using renewable energy sources.		[SW2] Assessment of knowledge contained in presentation		

Subject contents	1.Conventional and non-conventional energy sources division and types2.Solar energy: types of solar collectors, construction and principle of operation of flat plate collectors, construction and principle of operation of vacuum collectors, selection of collectors.2 Heat pumps: Schematics and principle of operation, definition of COP, SOP, division and types of lower heat sources, examples of heat pump applications;3 Geothermal waters: ways of using geothermal sources, geothermal water resources, geothermal heat plant solutions monovalent and bivalent systems.4 Biomass: energy potential of biomass, methods of energy use of biomass, examples of pellet and straw combustion plant solutions. Methane fermentation systems (biogas plants and biorefineries).5 Wind energy and its utilisation: energy potential of wind, types of wind turbines, Basic information on wind power plants.6. photovoltaic cells: construction and principle of operation, examples of application		
Prerequisites and co-requisites	Knowledge of selected topics in physics, chemistry and biology. Basic principles and laws of engineering thermodynamics, heat transfer and fluid mechanics. fluid mechanics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Classroom exercises	60.0%	60.0%
	Lecture	60.0%	40.0%
