

Subject card

Subject name and code	Advanced foundations, PG_00042226								
Field of study	Civil Engineering								
Date of commencement of studies	February 2025		Academic year of realisation of subject			2024/2025			
Education level	second-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			English			
Semester of study	1		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Department of Geotechnics, Geology and Marine Civil Engineering -> Faculty of Civil and Environmental Engineering								
Name and surname	Subject supervisor		dr hab. inż. Marcin Cudny						
of lecturer (lecturers)	Teachers								
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	Project Semin		SUM	
	Number of study hours	15.0	0.0	0.0	15.0		0.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		5.0		15.0		50	
Subject objectives	Introduction to design an analysis of advanced geotechnical structures. Example engineering problem analysed in project classes is piled raft foundation. The foundation need to be designed with standard methods then it shoulld be analysed (soil-structure interaction, deformation analysis) with finite element method (FEM). Prefered tool is FE-system ZSoil (free student version).

RY_W14 Intows and applies Construction Law, has knowledge of construction Law, has been added to construct the construction of constructions and constructions. Purpose of the construction of the construction and constructions and construction of material testing and contruction technologies. RY_W17 Law sepanded knowledge of theory of road and only of material testing and contruction of material testing and contruction technologies. RY_W16 Law sepanded knowledge of theory of road and only of the construction of material testing and contruction technologies. RY_W16 Law sepanded knowledge of theory of road and only of the construction of material testing and contruction technologies. RY_W16 Law sepanded knowledge of theory of road and only of the construction of material testing and contruction of material model and dynamical construction in complex soil conditions for complex soil condit	Learning outcomes	Course outcome	Subject outcome	Method of verification					
Continuum Mechanics, knows rise of static analysis, stability and dynamics of complex productions of a maryses of static analysis, stability and synamics of complex productions and analyses of soil-architecture interaction. Knowledge of basic constitutive models of sails with the production of the		building codes and obeys the Construction Law; has knowledge on environmetal impact of	recommendations in the Eurocode	contained in written work and					
Introduction basic rules applications. Prerequisites and criteria Preventions Prerequisites Preventions Prerequisites Preventions Prerequisites Preventions Prerequisites Preventions Preven		Continuum Mechanics, knows rules of static analysis, stability and dynamics of complex rod, shell and volume structures, both in linear and basic nonlinear	advanced design calculations and analyses of soil-structure interaction. Knowledge of basic constitutive models of soils with their parameters. Ability to build a computational model of various	knowledge [SW3] Assessment of knowledge contained in written work and					
Interpret the geotechnical investigators, to analyse the foundation stability, can design direct and deep foundations in onembex soil conditions to in complex soil conditions for complicated statical and dynamical conditions and drainage conditions and theoreticaly firm knowledge about geotechnical investigation, the rules of geotechnical design and engineering geology; knows the complicated processes in soil, techniques of foundations, draining systems, surplications and engineering geology; knows the complicated processes in soil, techniques of foundations, draining systems, surplications and earthworks Subject contents		knowledge of theory of road and airport pavements, pavement maintenence, advanced methods of material testing and contruction	of ground improvements under road embankments in difficult						
theoreticaly firm knowledge about geotechnical investigation, the rules of geotechnical investigation, the rules of geotechnical along parameters depending on the selected methods of designing and engineering geology, knows the complicated processes in soil, techniques of foundations, draining systems, soil strengthening, geosynthetics applications, underground constructions and earthworks Subject contents 1. Introduction basic rules, methods and standards in designing geotechnical structures. 2. Shallow and raft foundations 3. Piled foundations 3. Piled foundations 4. Piled raft foundations 3. Piled foundations 4. Piled raft foundations 5. Ground improvement methods of piled raft foundations 6. Basic rules on FEM in geotechnical applications. 7. Different design methods of piled raft foundations 9. Induces of material model in analyses of soil-structure interaction. 10. Understending and estimation of material parameters of advanced soil constitutive models. Prerequisites and co-requisites Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade correctness and quality of the project report activity during project classes 10.0% 10.0% Recommended reading Recommended reading Recommended reading Supplementary literature 1. Wood D.M., Geotechnical Design, Construction and Verification, 2. Eurocode 7 - Geotechnical Boesign, Construction and Verification, 2. Eurocode 7 - Geotechnical Modelling, 2. Terzaghi K., Peck R.B., Mesri G., Soil Mechanics in Engineering Practice. Example issues/ example questions/ tasks being completed 2. Analysis of calculation parameters and their variability with depth. 2. Calculation model made in the ZSoil system. 4. Comparative analysis of the obtained results in the project.		interpret the geotechnical investigations, to analyse the foundation stability; can design direct and deep foundations in complex soil conditions for complicated statical and dynamical	laboratory tests in order to perform advanced design calculations and numerical analyzes. It applies to different types of soil, load conditions and drainage	analyse information [SU5] Assessment of ability to					
2. Shallow and raft foundations 3. Piled foundations 4. Piled raft foundations 5. Ground improvement methods. 6. Basic rules on FEM in geotechnical applications. 7. Different design methods of piled raft foundations. 8. Modelling of piled raft foundation with FEM. 9. Influence of material model in analyses of soil-structure interaction. 10. Understending and estimation of material parameters of advanced soil constitutive models. Prerequisites and co-requisites Assessment methods and criteria Subject passing criteria Passing threshold Percentage of the final grade correctness and quality of the project report activity during project classes 10.0% Recommended reading Basic literature 1. ICE manual of geotechnical engineering, Volume 2. Geotechnical Design, Construction and Verification, 2. Eurocode 7 - Geotechnical Design, 3.
