

Subject card

Subject name and code	Durability of Concrete Structures , PG_00045886										
Field of study	Civil Engineering										
Date of commencement of studies	February 2025	Academic year of realisation of subject		2025/2026							
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study						
Mode of study	Full-time studies	Mode of delivery		at the university							
Year of study	1	Language of instruction		Polish							
Semester of study	2	ECTS credits		3.0							
Learning profile	general academic profile	Assessment form		assessment							
Conducting unit	Department of Concrete Structures -> Faculty of Civil and Environmental Engineering										
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Krystyna Nagrodzka-Godycka								
	Teachers										
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar					
	Number of study hours	15.0	0.0	0.0	15.0	0.0					
E-learning hours included: 0.0											
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM					
	Number of study hours	30	5.0		40.0	75					
Subject objectives	Knowledge of basic issues related to the durability of concrete structures. Determining the reliability of structures in terms of European standards, types of loads, combinatorics. Knowledge of the principles of verification of stress states related to durability. The ability to determine the effects of shrinkage and temperature gradient on the structure. Understanding the impact of fire temperatures on structural elements and properties of steel and concrete. Understanding the methods of verifying the load capacity of structural elements under fire load										
Learning outcomes	Course outcome		Subject outcome			Method of verification					
	[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements		Based on lectures and designing, the student is prepared to analyze and dimension complex concrete structures under the influence of thermal interactions in the aspect of durability			[SW2] Assessment of knowledge contained in presentation					
	[K7_K02] Recognizes the significance of knowledge in solving cognitive and practical problems; reliably evaluates results of his own and team research		On the basis of lectures and design works, the student is prepared to analyze and dimension complex building structures in the aspect of durability			[SK2] Assessment of progress of work					
	[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details		The subject of the project is an object that is subjected to adverse environmental influences.			[SU4] Assessment of ability to use methods and tools					
	[K7_W15] has deep and adequate knowledge of civil engineering, within offered specialization and profile		The student acquires practical skills of design in the field of concrete structures at an advanced level			[SW1] Assessment of factual knowledge					

Subject contents	<p>Basics of making probabilistic reliability of concrete structures in terms of modern standards of structural design, examples of applications in terms of Eurocodes. Checking criteria in terms of building structures to Eurocode 1990, the concept of class structure and consequently the destruction of class reliability, appropriate combinations of interactions.</p> <p>Basic knowledge on the impact of shrinkage and thermal effects arising mainly from the difference in temperature (temperature gradient) on the elements of reinforced concrete structures. Shrinkage of concrete and thermal loads (temperature gradient) in the static and strength analysis. Examples of modeling in computational engineering programs (CAE). The necessary amount reinforcement of shrinkage and thermal loads.</p> <p>Structural fire design – general rules. Fire resistance classifications. Fire curves: the hypothetical fire scenario and estimation of the appropriate design model of fire. Determination of structural fire loads appropriate for the accidental situation of fire, Temperature field calculation. The basic properties of concrete and steel reinforcement to their behavior in fire conditions, Eurocode models. Calculations of reinforced concrete structures fire resistance, Code requirements.</p>									
Prerequisites and co-requisites										
Assessment methods and criteria	<table border="1" data-bbox="446 653 1486 747"> <thead> <tr> <th data-bbox="446 653 794 685">Subject passing criteria</th><th data-bbox="794 653 1144 685">Passing threshold</th><th data-bbox="1144 653 1486 685">Percentage of the final grade</th></tr> </thead> <tbody> <tr> <td data-bbox="446 685 794 716">project</td><td data-bbox="794 685 1144 716">50.0%</td><td data-bbox="1144 685 1486 716">50.0%</td></tr> <tr> <td data-bbox="446 716 794 747">presentation</td><td data-bbox="794 716 1144 747">50.0%</td><td data-bbox="1144 716 1486 747">50.0%</td></tr> </tbody> </table>	Subject passing criteria	Passing threshold	Percentage of the final grade	project	50.0%	50.0%	presentation	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade								
project	50.0%	50.0%								
presentation	50.0%	50.0%
