

Subject card

Subject name and code	Hydro and Marine Engineering [L], PG_00045889						
Field of study	Civil Engineering						
Date of commencement of studies	February 2025		Academic year of realisation of subject		2025/2026		
Education level	second-cycle studies		Subject group		Optional subject group		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Witold Sterpejkowicz-Wersocki				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	30.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Understanding the principles and ways of using the hydroelectric resources of rivers.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W15] has deep and adequate knowledge of civil engineering, within offered specialization and profile		The student deepens knowledge in the field of hydraulic engineering and learns the principles of operation of hydropower plants.		[SW1] Assessment of factual knowledge		
	[K7_W11] has deep knowlege of marine and inland hydrotechnical constructions; has knowledge about hydraulical and hydrological constrains in design and exploitation of buildings		The student describes the principles of selecting the power of hydropower plants and designing intakes and bringing water to the power plant building. The student analyzes the selection of the type of water turbine and the basic electrical and mechanical equipment of the hydroelectric power plant. The student explains the role and importance of hydropower in regulating the power system.		[SW1] Assessment of factual knowledge		
	[K7_W14] knows and applies building codes and obeys the Construction Law; has knowledge on environmetal impact of investment realisation		The student knows and can apply the provisions related to technical conditions, which hydrotechnical constructions and their location should meet.		[SW1] Assessment of factual knowledge		
	[K7_U14] is able to plan and to interpret the geotechnical investigations, to analyse the foundation stability; can design direct and deep foundations in complex soil conditions for complicated statical and dynamical loads		The student is able to design and check the stability of the foundation of the weir and hydroelectric power plant.		[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>LECTURE. Sources and resources of the primary energy of the world. Potential and technical water and energy resources of the world and Poland. The share of hydropower in the production of electricity in the world and Poland. Historical view of use of hydropower. The development of water turbines. Types of hydropower plants (flow, reservoir and pumped-storage). Power selection of hydropower plants. Rules for selecting a turbine, and similarity of water turbines. Actional and reactional water turbines (Pelton, Francis, Kaplan, Deriaz, propeller type). Characteristics of water turbines. Hydroelectric equipment: generators, speed transmissions, power regulators, flywheels, transformers. Solutions of hydroelectric plants. Power channels and pressure pipelines. Hydraulic losses on the water intake to the power plant, on the grates and on the water turbine. Balancing chambers. Small hydropower plants. Water power plant functions in the power system. Selection of basic parameters of earth dams.</p> <p>PROJECT: Project of a flow hydropower plant with a weir. Selection of power, type of turbine and equipment of the hydropower plant.</p>		
Prerequisites and co-requisites	Knowledge in the field of Hydraulic Engineering or Hydro & Marine Civil Engineering.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		75.0%	40.0%
		60.0%	20.0%
		60.0%	40.0%
